#history <http://www.reportlab.co.uk/cgi-bin/viewcvs.cgi/public/reportlab/trunk/reportlab/graphics/charts/textlabels.py>

Classes

BarChartLabel (Label)

An extended Label allowing for nudging, lines visibility etc

Public Attributes

angle angle of label: default (0), 90 is vertical, 180 is upside down, etc

bottomPadding padding at bottom of box

boxAnchor anchoring point of the label

boxFillColor the filling color of the box

boxStrokeColor border color of the box

boxStrokeWidth border width

boxTarget one of ('normal','anti','lo','hi')

dx delta x - offset

dy delta y - offset

fillColor label text color

fixedEnd None or fixed draw ends +/-

fixedStart None or fixed draw starts +/-

fontName the name of the font used

fontSize the size of the font

height the height of the text

leading

leftPadding padding at left of box

lineStrokeColor Color for a drawn line

lineStrokeWidth Non-zero for a drawn line

maxWidth maximum width the label can grow to

nudge Non-zero sign dependent nudge

rightPadding padding at right of box

strokeColor label text border color

strokeWidth label text border width

text the actual text to display

textAnchor the anchoring point of the text inside the label

topPadding padding at top of box

visible True if the label is to be drawn

width the width of the label

x

y

Example

```
def demo(self):
    """This shows a label positioned with its top right corner
    at the top centre of the drawing, and rotated 45 degrees."""

    d = Drawing(200, 100)

    # mark the origin of the label
    d.add(Circle(100,90, 5, fillColor=colors.green))

    lab = Label()
    lab.setOrigin(100,90)
    lab.boxAnchor = 'ne'
    lab.angle = 45
    lab.dx = 0
    lab.dy = -20
    lab.boxStrokeColor = colors.green
    lab.setText('Another\nMulti-Line\nString')
    d.add(lab)

    return d
```

Properties of Example Widget

```
angle = 0
bottomPadding = 0
boxAnchor = 'c'
boxFillColor = None
boxStrokeColor = None
boxStrokeWidth = 0.5
boxTarget = 'normal'
dx = 0
dy = 0
fillColor = Color(0,0,0,1)
fixedEnd = None
fixedStart = None
fontName = 'Times-Roman'
fontSize = 10
height = None
leading = None
leftPadding = 0
lineStrokeColor = None
lineStrokeWidth = 0
maxWidth = None

strokeWidth = 0.10000000000000001
textAnchor = 'start'
topPadding = 0
visible = 1
width = None
x = 0
y = 0
```

Label (Widget)

A text label to attach to something else, such as a chart axis.

This allows you to specify an offset, angle and many anchor properties relative to the label's origin. It allows, for example, angled multiline axis labels.

Public Attributes

angle angle of label: default (0), 90 is vertical, 180 is upside down, etc

bottomPadding padding at bottom of box

boxAnchor anchoring point of the label

boxFillColor the filling color of the box

boxStrokeColor border color of the box

boxStrokeWidth border width

boxTarget one of ('normal','anti','lo','hi')

dx delta x - offset

dy delta y - offset

fillColor label text color

fontName the name of the font used

fontSize the size of the font

height the height of the text

leading

leftPadding padding at left of box

maxWidth maximum width the label can grow to

rightPadding padding at right of box

strokeColor label text border color

strokeWidth label text border width

text the actual text to display

textAnchor the anchoring point of the text inside the label

topPadding padding at top of box

visible True if the label is to be drawn

width the width of the label

x

y

Example

```
def demo(self):
    """This shows a label positioned with its top right corner
    at the top centre of the drawing, and rotated 45 degrees."""

    d = Drawing(200, 100)

    # mark the origin of the label
    d.add(Circle(100,90, 5, fillColor=colors.green))
```

```
lab = Label()
lab.setOrigin(100,90)
lab.boxAnchor = 'ne'
lab.angle = 45
lab.dx = 0
lab.dy = -20
lab.boxStrokeColor = colors.green
lab.setText('Another\nMulti-Line\nString')
d.add(lab)

return d
```

Properties of Example Widget

```
angle = 0
bottomPadding = 0
boxAnchor = 'c'
boxFillColor = None
boxStrokeColor = None
boxStrokeWidth = 0.5
boxTarget = 'normal'
dx = 0
dy = 0
fillColor = Color(0,0,0,1)
fontName = 'Times-Roman'
fontSize = 10
height = None
leading = None
leftPadding = 0
maxWidth = None
rightPadding = 0
strokeColor = None
strokeWidth = 0.10000000000000001
textAnchor = 'start'
topPadding = 0
visible = 1
width = None
x = 0
y = 0
```

NA_Label (BarChartLabel)

An extended Label allowing for nudging, lines visibility etc

Public Attributes

angle angle of label: default (0), 90 is vertical, 180 is upside down, etc

bottomPadding padding at bottom of box

boxAnchor anchoring point of the label

boxFillColor the filling color of the box

boxStrokeColor border color of the box

boxStrokeWidth border width

boxTarget one of ('normal','anti','lo','hi')

dx delta x - offset

dy delta y - offset

fillColor label text color

fixedEnd None or fixed draw ends +/-

fixedStart None or fixed draw starts +/-

fontName the name of the font used

fontSize the size of the font

height the height of the text

leading

leftPadding padding at left of box

lineStrokeColor Color for a drawn line

lineStrokeWidth Non-zero for a drawn line

maxWidth maximum width the label can grow to

nudge Non-zero sign dependent nudge

rightPadding padding at right of box

strokeColor label text border color

strokeWidth label text border width

text Text to be used for N/A values

textAnchor the anchoring point of the text inside the label

topPadding padding at top of box

visible True if the label is to be drawn

width the width of the label

x

y

Example

```
def demo(self):
    """This shows a label positioned with its top right corner
    at the top centre of the drawing, and rotated 45 degrees."""
```

```
d = Drawing(200, 100)

text = 'n/a'
textAnchor = 'start'
topPadding = 0
visible = 1
width = None
x = 0
y = 0
```

doughnut

Doughnut chart

Produces a circular chart like the doughnut charts produced by Excel.
Can handle multiple series (which produce concentric 'rings' in the chart).

Classes

Doughnut (AbstractPieChart)

Public Attributes

data list of numbers defining sector sizes; need not sum to 1

direction 'clockwise' or 'anticlockwise'

height height of doughnut bounding box. Need not be same as height.

labels optional list of labels to use for each data point

simpleLabels If true(default) use String not super duper WedgeLabel

slices collection of sector descriptor objects

startAngle angle of first slice; like the compass, 0 is due North

width width of doughnut bounding box. Need not be same as width.

x X position of the chart within its container.

y Y position of the chart within its container.

Example

```
def demo(self):
    d = Drawing(200, 100)

    dn = Doughnut()
    dn.x = 50
    dn.y = 10
    dn.width = 100
    dn.height = 80
    dn.data = [10,20,30,40,50,60]
    dn.labels = ['a','b','c','d','e','f']

    dn.slices.strokeWidth=0.5
    dn.slices[3].popout = 10
    dn.slices[3].strokeWidth = 2
    dn.slices[3].strokeDashArray = [2,2]
    dn.slices[3].labelRadius = 1.75
    dn.slices[3].fontColor = colors.red
    dn.slices[0].fillColor = colors.darkcyan
    dn.slices[1].fillColor = colors.blueviolet
    dn.slices[2].fillColor = colors.blue
    dn.slices[3].fillColor = colors.cyan
    dn.slices[4].fillColor = colors.aquamarine
    dn.slices[5].fillColor = colors.cadetblue
    dn.slices[6].fillColor = colors.lightcoral

    d.add(dn)
    return d
```

Properties of Example Widget

```
data = [1, 1]
direction = 'clockwise'
height = 100
labels = None
simpleLabels = 1
slices = <reportlab.graphics.widgetbase.TypedPropertyCollection instance at 0x803f21bd8>
startAngle = 90
width = 100
x = 0
y = 0
```

Functions

sample1(...)

Make up something from the individual Sectors

Example

```
def sample1():
    "Make up something from the individual Sectors"

    d = Drawing(400, 400)
    g = Group()

    s1 = Wedge(centerx=200, centery=200, radius=150, startangleddegrees=0, endangleddegrees=120, radius=150)
    s1.fillColor=colors.red
    s1.strokeColor=None
    d.add(s1)
    s2 = Wedge(centerx=200, centery=200, radius=150, startangleddegrees=120, endangleddegrees=240, radius=150)
    s2.fillColor=colors.green
    s2.strokeColor=None
    d.add(s2)
    s3 = Wedge(centerx=200, centery=200, radius=150, startangleddegrees=240, endangleddegrees=260, radius=150)
    s3.fillColor=colors.blue
    s3.strokeColor=None
    d.add(s3)
    s4 = Wedge(centerx=200, centery=200, radius=150, startangleddegrees=260, endangleddegrees=360, radius=150)
    s4.fillColor=colors.gray
    s4.strokeColor=None
    d.add(s4)

    return d
```

sample2(...)

Make a simple demo

Example

```
def sample2():  
    "Make a simple demo"  
  
    d = Drawing(400, 400)  
  
    dn = Doughnut()  
    dn.x = 50  
    dn.y = 50  
    dn.width = 300  
    dn.height = 300  
    dn.data = [10,20,30,40,50,60]  
  
    d.add(dn)  
  
    return d
```

sample3(...)

Make a more complex demo

Example

```
def sample3():
    "Make a more complex demo"

    d = Drawing(400, 400)
    dn = Doughnut()
    dn.x = 50
    dn.y = 50
    dn.width = 300
    dn.height = 300
    dn.data = [[10,20,30,40,50,60], [10,20,30,40]]
    dn.labels = ['a','b','c','d','e','f']

    d.add(dn)

    return d
```

areas

This module defines a Area mixin classes

Classes

PlotArea(Widget)

Abstract base class representing a chart's plot area, pretty unusable by itself.

Public Attributes

background Handle to background object e.g. Rect(0,0,width,height).

debug Used only for debugging.

fillColor Color of the plot area interior.

height Height of the chart.

strokeColor Color of the plot area border.

strokeWidth Width plot area border.

width Width of the chart.

x X position of the lower-left corner of the chart.

y Y position of the lower-left corner of the chart.

Example

```
def demo(self):
    msg = "demo() must be implemented for each Widget!"
    raise shapes.NotImplementedError, msg
```

Properties of Example Widget

```
background = None
debug = 0
fillColor = None
height = 85
strokeColor = None
strokeWidth = 1
width = 180
x = 20
y = 10
```

linecharts

This module defines a very preliminary Line Chart example.

Classes

AbstractLineChart (PlotArea)

Public Attributes

background Handle to background object e.g. Rect(0,0,width,height).

debug Used only for debugging.

fillColor Color of the plot area interior.

height Height of the chart.

strokeColor Color of the plot area border.

strokeWidth Width plot area border.

width Width of the chart.

x X position of the lower-left corner of the chart.

y Y position of the lower-left corner of the chart.

Example

```
def demo(self):
    msg = "demo() must be implemented for each Widget!"
    raise shapes.NotImplementedError, msg
```

Properties of Example Widget

```
background = None
debug = 0
fillColor = None
height = 85
strokeColor = None
strokeWidth = 1
width = 180
x = 20
y = 10
```

HorizontalLineChart (LineChart)

Line chart with multiple lines.

A line chart is assumed to have one category and one value axis. Despite its generic name this particular line chart class has a vertical value axis and a horizontal category one. It may evolve into individual horizontal and vertical variants (like with the existing bar charts).

Available attributes are:

x: x-position of lower-left chart origin

y: y-position of lower-left chart origin

width: chart width

height: chart height

useAbsolute: disables auto-scaling of chart elements (?)

lineLabelNudge: distance of data labels to data points

lineLabels: labels associated with data values

lineLabelFormat: format string or callback function

groupSpacing: space between categories

joinedLines: enables drawing of lines

strokeColor: color of chart lines (?)

fillColor: color for chart background (?)

lines: style list, used cyclically for data series

valueAxis: value axis object

categoryAxis: category axis object

categoryNames: category names

data: chart data, a list of data series of equal length

Public Attributes

annotations list of callables, will be called with self, xscale, yscale.

background Handle to background object e.g. Rect(0,0,width,height).

categoryAxis Handle of the category axis.

categoryNames List of category names.

data Data to be plotted, list of (lists of) numbers.

debug Used only for debugging.

fillColor Color of the plot area interior.

groupSpacing ? - Likely to disappear.

height Height of the chart.

inFill Whether infilling should be done.

joinedLines Display data points joined with lines if true.

lineLabelArray explicit array of line label values, must match size of data if present.

lineLabelFormat Formatting string or function used for data point labels.

lineLabelNudge Distance between a data point and its label.

lineLabels Handle to the list of data point labels.

lines Handle of the lines.

reversePlotOrder If true reverse plot order.

strokeColor Color of the plot area border.

strokeWidth Width plot area border.

useAbsolute Flag to use absolute spacing values.

valueAxis Handle of the value axis.

width Width of the chart.

x X position of the lower-left corner of the chart.

y Y position of the lower-left corner of the chart.

Example

```
def demo(self):
    """Shows basic use of a line chart."""

    drawing = Drawing(200, 100)

    data = [
        (13, 5, 20, 22, 37, 45, 19, 4),
        (14, 10, 21, 28, 38, 46, 25, 5)
    ]

    lc = HorizontalLineChart()

HorizontalLineChart3D(HorizontalLineChart)

Public Attributes

annotations list of callables, will be called with self, xscale, yscale.

background Handle to background object e.g. Rect(0,0,width,height).

categoryAxis Handle of the category axis.

categoryNames List of category names.

data Data to be plotted, list of (lists of) numbers.

debug Used only for debugging.

fillColor Color of the plot area interior.

groupSpacing ? - Likely to disappear.

height Height of the chart.

inFill Whether infilling should be done.

joinedLines Display data points joined with lines if true.

lineLabelArray explicit array of line label values, must match size of data if present.

lineLabelFormat Formatting string or function used for data point labels.

lineLabelNudge Distance between a data point and its label.

lineLabels Handle to the list of data point labels.

lines Handle of the lines.

reversePlotOrder If true reverse plot order.

strokeColor Color of the plot area border.

strokeWidth Width plot area border.

theta_x dx/dz

theta_y dy/dz

useAbsolute Flag to use absolute spacing values.

valueAxis Handle of the value axis.

width Width of the chart.

x X position of the lower-left corner of the chart.

y Y position of the lower-left corner of the chart.

zDepth depth of an individual series

zSpace z gap around series

Example

```

dotbox

Classes

DotBox(Widget)

Returns a dotbox widget.

Public Attributes

dotColor Colour of the circle on the box

dotDiameter Diameter of the circle used for the 'dot'

dotXPosition X Position of the circle

dotYPosition X Position of the circle

gridColor Colour for the box and gridding

gridDivWidth Width of each 'box'

labelFontName Name of font used for the labels

labelFontSize Size of font used for the labels

labelOffset Space between label text and grid edge

strokeWidth Width of the grid and dot outline

x X Position of dotbox

xlables List of text labels for boxes on left hand side

y Y Position of dotbox

ylables Text label for second box on left hand side

Example

```
def demo(self,drawing=None):
    if not drawing:
        tx,ty=self._getDrawingDimensions()
        drawing = Drawing(tx,ty)
        drawing.add(self.draw())
    return drawing
```

Properties of Example Widget

```
dotColor = Color(.909804,.878431,.466667,1)

```

```
labelOffset = 5
strokeWidth = 0.5
x = 30
xlabels = ['Value', 'Blend', 'Growth']
y = 5
ylabels = ['Small', 'Medium', 'Large']
```

axes

Collection of axes for charts.

The current collection comprises axes for charts using cartesian coordinate systems. All axes might have tick marks and labels. There are two dichotomies for axes: one of X and Y flavours and another of category and value flavours.

Category axes have an ordering but no metric. They are divided into a number of equal-sized buckets. Their tick marks or labels, if available, go BETWEEN the buckets, and the labels are placed below to/left of the X/Y-axis, respectively.

Value axes have an ordering AND metric. They correspond to a numeric quantity. Value axis have a real number quantity associated with it. The chart tells it where to go.

The most basic axis divides the number line into equal spaces and has tickmarks and labels associated with each; later we will add variants where you can specify the sampling interval.

The charts using axis tell them where the labels should be placed.

Axes of complementary X/Y flavours can be connected to each other in various ways, i.e. with a specific reference point, like an x/value axis to a y/value (or category) axis. In this case the connection can be either at the top or bottom of the former or at any absolute value (specified in points) or at some value of the former axes in its own coordinate system.

Classes

AdjYValueAxis(YValueAxis)

A Y-axis applying additional rules.

Depending on the data and some built-in rules, the axis may choose to adjust its range and origin.

Public Attributes

annotations list of annotations

avoidBoundFrac Fraction of interval to allow above and below.

drawGridLast if true draw gridlines after everything else.

forceZero Ensure zero in range if true.

gridEnd End of grid lines wrt axis origin

gridStart Start of grid lines wrt axis origin

gridStrokeColor Color of grid lines.

gridStrokeDashArray Dash array used for grid lines.

gridStrokeLineCap Grid Line cap 0=butt, 1=round 2=square

gridStrokeLineJoin Grid Line join 0=miter, 1=round 2=bevel

gridStrokeMiterLimit Grid miter limit control miter line joins

gridStrokeWidth Width of grid lines.

hiLLen extra line length after end of the axis

joinAxis Join both axes if true.

joinAxisMode Mode used for connecting axis ('left', 'right', 'value', 'points', None).

joinAxisPos Position at which to join with other axis.

labelAxisMode Like joinAxisMode, but for the axis labels

labelTextFormat Formatting string or function used for axis labels.

labelTextPostFormat Extra Formatting string.

labelTextScale Scaling for label tick values.

labels Handle of the axis labels.

leftAxisOrigShiftIPC Lowest label shift interval ratio.

leftAxisOrigShiftMin Minimum amount to shift.

leftAxisPercent When true add percent sign to label values.

leftAxisSkipLL0 Skip/Keep lowest tick label when true/false. Or skiplist

loLLen extra line length before start of the axis

maximumTicks Maximum number of ticks.

minimumTickSpacing Minimum value for distance between ticks.

origShiftIPC Lowest label shift interval ratio.

origShiftMin Minimum amount to shift.

origShiftSpecialValue special value for shift

rangeRound How to round the axis limits

requiredRange Minimum required value range.

reverseDirection If true reverse category direction.

skipEndL Skip high/low tick labels

strokeColor Color of axis line and ticks.

strokeDashArray Dash array used for axis line.

strokeLineCap Line cap 0=butt, 1=round 2=square

strokeLineJoin Line join 0=miter, 1=round 2=bevel

strokeMiterLimit miter limit control miter line joins

strokeWidth Width of axis line and ticks.

style How values are plotted!

subGridEnd End of grid lines wrt axis origin

subGridStart Start of grid lines wrt axis origin

subGridStrokeColor Color of grid lines.

subGridStrokeDashArray Dash array used for grid lines.

subGridStrokeLineCap Grid Line cap 0=butt, 1=round 2=square

subGridStrokeLineJoin Grid Line join 0=miter, 1=round 2=bevel

subGridStrokeMiterLimit Grid miter limit control miter line joins

subGridStrokeWidth Width of grid lines.

subTickHi sub tick up or right

subTickLo sub tick down or left

subTickNum Number of axis sub ticks, if >0

tickAxisMode Like joinAxisMode, but for the ticks

tickLeft Tick length left of the axis.

tickRight Tick length right of the axis.

valueMax Maximum value on axis.

valueMin Minimum value on axis.

valueStep Step size used between ticks.

valueSteps List of step sizes used between ticks.

visible Display entire object, if true.

visibleAxis Display axis line, if true.

visibleGrid Display axis grid, if true.

visibleLabels Display axis labels, if true.

visibleSubGrid Display axis sub grid, if true.

visibleSubTicks Display axis sub ticks, if true.

visibleTicks Display axis ticks, if true.

zrangePref Zero range axis limit preference.

Example

```
def demo(self):
    data = [(10, 20, 30, 42)]
    self.setPosition(100, 10, 80)
    self.configure(data)

    drawing = Drawing(200, 100)
    drawing.add(self)
    return drawing
```

CategoryAxis(_AxisG)

Abstract category axis, unusable in itself.

Public Attributes

annotations list of annotations

categoryNames List of category names.

drawGridLast if true draw gridlines after everything else.

gridEnd End of grid lines wrt axis origin

gridStart Start of grid lines wrt axis origin

gridStrokeColor Color of grid lines.

gridStrokeDashArray Dash array used for grid lines.

gridStrokeLineCap Grid Line cap 0=butt, 1=round 2=square

gridStrokeLineJoin Grid Line join 0=miter, 1=round 2=bevel

gridStrokeMiterLimit Grid miter limit control miter line joins

gridStrokeWidth Width of grid lines.

hiLen extra line length after end of the axis

hiPad extra inner space after end of the axis

joinAxis Join both axes if true.

joinAxisPos Position at which to join with other axis.

labelAxisMode Like joinAxisMode, but for the axis labels

labels Handle of the axis labels.

loLen extra line length before start of the axis

loPad extra inner space before start of the axis

reverseDirection If true reverse category direction.

strokeColor Color of axis line and ticks.

strokeDashArray Dash array used for axis line.

strokeLineCap Line cap 0=butt, 1=round 2=square

strokeLineJoin Line join 0=miter, 1=round 2=bevel

strokeMiterLimit miter limit control miter line joins

strokeWidth Width of axis line and ticks.

style How common category bars are plotted

tickShift Tick shift typically

visible Display entire object, if true.

visibleAxis Display axis line, if true.

visibleGrid Display axis grid, if true.

visibleLabels Display axis labels, if true.

visibleTicks Display axis ticks, if true.

NormalDateXValueAxis(XValueAxis)

An X axis applying additional rules.

Depending on the data and some built-in rules, the axis displays normalDate values as nicely formatted dates.

The client chart should have NormalDate X values.

Public Attributes

annotations list of annotations

avoidBoundFrac Fraction of interval to allow above and below.

bottomAxisLabelSlack Fractional amount used to adjust label spacing

dailyFreq True if we are to assume daily data to be ticked at end of month.

dayOfWeekName Weekday names.

drawGridLast if true draw gridlines after everything else.

forceDatesEachYear List of dates in format "31-Dec","1-Jan". If present they will always be used for tick marks in the current year, rather than the dates chosen by the automatic algorithm. Hyphen compulsory, case of month optional.

forceEndDate Flag for enforced displaying of last date value.

forceFirstDate Flag for enforced displaying of first date value.

forceZero Ensure zero in range if true.

gridEnd End of grid lines wrt axis origin

gridStart Start of grid lines wrt axis origin

gridStrokeColor Color of grid lines.

gridStrokeDashArray Dash array used for grid lines.

gridStrokeLineCap Grid Line cap 0=butt, 1=round 2=square

gridStrokeLineJoin Grid Line join 0=miter, 1=round 2=bevel

gridStrokeMiterLimit Grid miter limit control miter line joins

gridStrokeWidth Width of grid lines.

hiLLen extra line length after end of the axis

joinAxis Join both axes if true.

joinAxisMode Mode used for connecting axis ('bottom', 'top', 'value', 'points', None).

joinAxisPos Position at which to join with other axis.

labelAxisMode Like joinAxisMode, but for the axis labels

labelTextFormat Formatting string or function used for axis labels.

labelTextPostFormat Extra Formatting string.

labelTextScale Scaling for label tick values.

labels Handle of the axis labels.

loLLen extra line length before start of the axis

maximumTicks Maximum number of ticks.

minimumTickSpacing Minimum value for distance between ticks.

monthName Month names.

niceMonth Flag for displaying months 'nicely'.

origShiftIPC Lowest label shift interval ratio.

origShiftMin Minimum amount to shift.

origShiftSpecialValue special value for shift

rangeRound How to round the axis limits

reverseDirection If true reverse category direction.

skipEndL Skip high/low tick labels

specifiedTickDates Actual tick values to use; no calculations done

strokeColor Color of axis line and ticks.

strokeDashArray Dash array used for axis line.

strokeLineCap Line cap 0=butt, 1=round 2=square

strokeLineJoin Line join 0=miter, 1=round 2=bevel

strokeMiterLimit miter limit control miter line joins

strokeWidth Width of axis line and ticks.

style How values are plotted!

subGridEnd End of grid lines wrt axis origin

subGridStart Start of grid lines wrt axis origin

subGridStrokeColor Color of grid lines.

subGridStrokeDashArray Dash array used for grid lines.

subGridStrokeLineCap Grid Line cap 0=butt, 1=round 2=square

subGridStrokeLineJoin Grid Line join 0=miter, 1=round 2=bevel

subGridStrokeMiterLimit Grid miter limit control miter line joins

subGridStrokeWidth Width of grid lines.

subTickHi sub tick up or right

subTickLo sub tick down or left

subTickNum Number of axis sub ticks, if >0

tickAxisMode Like joinAxisMode, but for the ticks

tickDown Tick length down the axis.

tickUp Tick length up the axis.

valueMax Maximum value on axis.

valueMin Minimum value on axis.

valueStep Step size used between ticks.

valueSteps List of step sizes used between ticks.

visible Display entire object, if true.

visibleAxis Display axis line, if true.

visibleGrid Display axis grid, if true.

visibleLabels Display axis labels, if true.

visibleSubGrid Display axis sub grid, if true.

visibleSubTicks Display axis sub ticks, if true.

visibleTicks Display axis ticks, if true.

xLabelFormat Label format string (e.g. '{mm}/{yy}') or function.

zrangePref Zero range axis limit preference.

Example

```
def demo(self):
    self.setPosition(20, 50, 150)
    self.configure([(10,20,30,40,50)])

    d = Drawing(200, 100)

    raise shapes.NotImplementedError, msg
```

Properties of Example Widget

Functions

sample0a(...)

Sample drawing with one xcat axis and two buckets.

Example

```
def sample0a():
    "Sample drawing with one xcat axis and two buckets."

    drawing = Drawing(400, 200)

    data = [(10, 20)]

    xAxis = XCategoryAxis()
    xAxis.setPosition(75, 75, 300)
    xAxis.configure(data)
    xAxis.categoryNames = ['Ying', 'Yang']
    xAxis.labels.boxAnchor = 'n'
    drawing.add(xAxis)
    return drawing
```

sample0b(...)

Sample drawing with one xcat axis and one bucket only.

Example

```
def sample0b():
    "Sample drawing with one xcat axis and one bucket only."

    drawing = Drawing(400, 200)

    data = [(10,)]

    xAxis = XCategoryAxis()
    xAxis.setPosition(75, 75, 300)
    xAxis.configure(data)
    xAxis.categoryNames = ['Ying']
    xAxis.labels.boxAnchor = 'n'
    drawing.add(xAxis)
    return drawing
```

sample1(...)

Sample drawing containing two unconnected axes.

Example

```
def sample1():
    "Sample drawing containing two unconnected axes."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    xAxis = XCategoryAxis()
    xAxis.setPosition(75, 75, 300)
    xAxis.configure(data)
    xAxis.categoryNames = ['Beer', 'Wine', 'Meat', 'Cannelloni']
    xAxis.labels.boxAnchor = 'n'
    xAxis.labels[3].dy = -15
    xAxis.labels[3].angle = 30
    xAxis.labels[3].fontName = 'Times-Bold'
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

sample4a(...)

Sample drawing, xvalue/yvalue axes, y connected at 100 pts to x.

Example

```
def sample4a():
    "Sample drawing, xvalue/yvalue axes, y connected at 100 pts to x."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    xAxis = XValueAxis()
    xAxis._length = 300
    xAxis.joinAxis = yAxis
    xAxis.joinAxisMode = 'points'
    xAxis.joinAxisPos = 100
    xAxis.configure(data)
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

sample4b(...)

Sample drawing, xvalue/yvalue axes, y connected at value 35 of x.

Example

```
def sample4b():
    "Sample drawing, xvalue/yvalue axes, y connected at value 35 of x."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    xAxis = XValueAxis()
    xAxis._length = 300
    xAxis.joinAxis = yAxis
    xAxis.joinAxisMode = 'value'
    xAxis.joinAxisPos = 35
    xAxis.configure(data)
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

sample4c(...)

Sample drawing, xvalue/yvalue axes, y connected to bottom of x.

Example

```
def sample4c():
    "Sample drawing, xvalue/yvalue axes, y connected to bottom of x."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    xAxis = XValueAxis()
    xAxis._length = 300
    xAxis.joinAxis = yAxis
    xAxis.joinAxisMode = 'bottom'
    xAxis.configure(data)
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

sample4c1(...)

xvalue/yvalue axes, without drawing axis lines/ticks.

Example

```
def sample4c1():
    "xvalue/yvalue axes, without drawing axis lines/ticks."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    yAxis.visibleAxis = 0
    yAxis.visibleTicks = 0
    xAxis = XValueAxis()
    xAxis._length = 300
    xAxis.joinAxis = yAxis
    xAxis.joinAxisMode = 'bottom'
    xAxis.configure(data)
    xAxis.visibleAxis = 0
    xAxis.visibleTicks = 0
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

30

20

10

10

20

30

40

sample4d(...)

Sample drawing, xvalue/yvalue axes, y connected to top of x.

Example

```
def sample4d():
    "Sample drawing, xvalue/yvalue axes, y connected to top of x."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    xAxis = XValueAxis()
    xAxis._length = 300
    xAxis.joinAxis = yAxis
    xAxis.joinAxisMode = 'top'
    xAxis.configure(data)
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

sample5a(...)

Sample drawing, xvalue/yvalue axes, y connected at 100 pts to x.

Example

```
def sample5a():
    "Sample drawing, xvalue/yvalue axes, y connected at 100 pts to x."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]

    drawing.add(yAxis)
    return drawing
```

barcharts

This module defines a variety of Bar Chart components.

The basic flavors are stacked and side-by-side, available in horizontal and vertical versions.

Classes

BarChart (PlotArea)

Abstract base class, unusable by itself.

Public Attributes

annotations list of callables, will be called with self, xscale, yscale.

background Handle to background object e.g. Rect(0,0,width,height).

barLabelArray explicit array of bar label values, must match size of data if present.

barLabelCallOut Callout function(label) label._callOutInfo = (self,g,rowNo,colNo,x,y,width,height,x00,y00,x0,y0)

barLabelFormat Formatting string or function used for bar labels.

barLabels Handle to the list of bar labels.

barSpacing Width between individual bars.

barWidth The width of an individual bar.

bars Handle of the individual bars.

categoryAxis Handle of the category axis.

data Data to be plotted, list of (lists of) numbers.

debug Used only for debugging.

fillColor Color of the plot area interior.

groupSpacing Width between groups of bars.

height Height of the chart.

naLabel Label to use for N/A values.

reversePlotOrder If true, reverse common category plot order.

strokeColor Color of the plot area border.

strokeWidth Width plot area border.

useAbsolute Flag to use absolute spacing values.

valueAxis Handle of the value axis.

width Width of the chart.

x X position of the lower-left corner of the chart.

y Y position of the lower-left corner of the chart.

BarChart3D (BarChart)

Public Attributes

annotations list of callables, will be called with self, xscale, yscale.

background Handle to background object e.g. Rect(0,0,width,height).

barLabelArray explicit array of bar label values, must match size of data if present.

barLabelCallOut Callout function(label) label._callOutInfo = (self,g,rowNo,colNo,x,y,width,height,x00,y00,x0,y0)

barLabelFormat Formatting string or function used for bar labels.

barLabels Handle to the list of bar labels.

barSpacing Width between individual bars.

barWidth The width of an individual bar.

bars Handle of the individual bars.

categoryAxis Handle of the category axis.

data Data to be plotted, list of (lists of) numbers.

debug Used only for debugging.

fillColor Color of the plot area interior.

groupSpacing Width between groups of bars.

height Height of the chart.

naLabel Label to use for N/A values.

reversePlotOrder If true, reverse common category plot order.

strokeColor Color of the plot area border.

strokeWidth Width plot area border.

theta_x dx/dz

theta_y dy/dz

useAbsolute Flag to use absolute spacing values.

valueAxis Handle of the value axis.

width Width of the chart.

x X position of the lower-left corner of the chart.

y Y position of the lower-left corner of the chart.

zDepth depth of an individual series

zSpace z gap around series

HorizontalBarChart (BarChart)

Horizontal bar chart with multiple side-by-side bars.

Public Attributes

annotations list of callables, will be called with self, xscale, yscale.

background Handle to background object e.g. Rect(0,0,width,height).

barLabelArray explicit array of bar label values, must match size of data if present.

barLabelCallOut Callout function(label) label._callOutInfo = (self,g,rowNo,colNo,x,y,width,height,x00,y00,x0,y0)

barLabelFormat Formatting string or function used for bar labels.

barLabels Handle to the list of bar labels.

barSpacing Width between individual bars.

barWidth The width of an individual bar.

bars Handle of the individual bars.

categoryAxis Handle of the category axis.

data Data to be plotted, list of (lists of) numbers.

debug Used only for debugging.

fillColor Color of the plot area interior.

groupSpacing Width between groups of bars.

height Height of the chart.

naLabel Label to use for N/A values.

reversePlotOrder If true, reverse common category plot order.

strokeColor Color of the plot area border.

strokeWidth Width plot area border.

useAbsolute Flag to use absolute spacing values.

valueAxis Handle of the value axis.

width Width of the chart.

x X position of the lower-left corner of the chart.

y Y position of the lower-left corner of the chart.

Example

```
def demo(self):
    """Shows basic use of a bar chart"""
    if self.__class__.__name__=='BarChart':
        raise NotImplementedError, 'Abstract Class BarChart has no demo'
    drawing = Drawing(200, 100)
    bc = self.__class__()
    drawing.add(bc)
    return drawing
```

HorizontalBarChart3D(BarChart3D, HorizontalBarChart)

Public Attributes

annotations list of callables, will be called with self, xscale, yscale.

background Handle to background object e.g. Rect(0,0,width,height).

barLabelArray explicit array of bar label values, must match size of data if present.

barLabelCallOut Callout function(label) label._callOutInfo =
(self,g,rowNo,colNo,x,y,width,height,x00,y00,x0,y0)

barLabelFormat Formatting string or function used for bar labels.

barLabels Handle to the list of bar labels.

barSpacing Width between individual bars.

barWidth The width of an individual bar.

bars Handle of the individual bars.

categoryAxis Handle of the category axis.

data Data to be plotted, list of (lists of) numbers.

debug Used only for debugging.

fillColor Color of the plot area interior.

groupSpacing Width between groups of bars.

height Height of the chart.

naLabel Label to use for N/A values.

reversePlotOrder If true, reverse common category plot order.

strokeColor Color of the plot area border.

strokeWidth Width plot area border.

theta_x dx/dz

theta_y dy/dz

useAbsolute Flag to use absolute spacing values.

valueAxis Handle of the value axis.

width Width of the chart.

x X position of the lower-left corner of the chart.

y Y position of the lower-left corner of the chart.

zDepth depth of an individual series

zSpace z gap around series

Example

```
def demo(self):
    """Shows basic use of a bar chart"""
    if self.__class__.__name__=='BarChart':
        raise NotImplementedError, 'Abstract Class BarChart has no demo'
    drawing = Drawing(200, 100)
    bc = self.__class__()
    drawing.add(bc)
    return drawing

    bc.categoryAxis.labels.boxAnchor = 'e'
    bc.categoryAxis.categoryNames = ['Ying', 'Yang']

    self.add(bc,name='HBC')
```

VerticalBarChart (BarChart)

Vertical bar chart with multiple side-by-side bars.

Public Attributes

annotations list of callables, will be called with self, xscale, yscale.

background Handle to background object e.g. Rect(0,0,width,height).

barLabelArray explicit array of bar label values, must match size of data if present.

barLabelCallOut Callout function(label) label._callOutInfo =
(self,g,rowNo,colNo,x,y,width,height,x00,y00,x0,y0)

barLabelFormat Formatting string or function used for bar labels.

barLabels Handle to the list of bar labels.

barSpacing Width between individual bars.

barWidth The width of an individual bar.

bars Handle of the individual bars.

categoryAxis Handle of the category axis.

data Data to be plotted, list of (lists of) numbers.

debug Used only for debugging.

fillColor Color of the plot area interior.

groupSpacing Width between groups of bars.

height Height of the chart.

naLabel Label to use for N/A values.

reversePlotOrder If true, reverse common category plot order.

strokeColor Color of the plot area border.

strokeWidth Width plot area border.

useAbsolute Flag to use absolute spacing values.

valueAxis Handle of the value axis.

width Width of the chart.

x X position of the lower-left corner of the chart.

y Y position of the lower-left corner of the chart.

Example

```
def demo(self):
    """Shows basic use of a bar chart"""
    if self.__class__.__name__=='BarChart':

lineplots

This module defines a very preliminary Line Plot example.

Classes

AreaLinePlot(LinePlot)

we're given data in the form [(X1,Y11,..Y1M)....(Xn,Yn1,...YnM)]

Public Attributes

annotations list of callables, will be called with self, xscale, yscale.

background Handle to background object e.g. Rect(0,0,width,height).

behindAxes If true use separate line group.

data Data to be plotted, list of (lists of) x/y tuples.

debug Used only for debugging.

fillColor Color used for background interior of plot area.

gridFirst If true use draw grids before axes.

height Height of the chart.

joinedLines Display data points joined with lines if true.

lineLabelArray explicit array of line label values, must match size of data if present.

lineLabelFormat Formatting string or function used for data point labels.

lineLabelNudge Distance between a data point and its label.

lineLabels Handle to the list of data point labels.

lines Handle of the lines.

reversePlotOrder If true reverse plot order.

strokeColor Color used for background border of plot area.

strokeWidth Width plot area border.

width Width of the chart.

x X position of the lower-left corner of the chart.

xValueAxis Handle of the x axis.

y Y position of the lower-left corner of the chart.

yValueAxis Handle of the y axis.

Example

```
def demo(self):
    """Shows basic use of a line chart."""

    drawing = Drawing(400, 200)

    data = [
        ((1,1), (2,2), (2.5,1), (3,3), (4,5)),
        ((1,2), (2,3), (2.5,2), (3.5,5), (4,6))
    ]

GridLinePlot(LinePlot)

A customized version of LinePlot.

It uses NormalDateXValueAxis() and AdjYValueAxis() for the X and Y axes.

The chart has a default grid background with thin horizontal lines aligned with the tickmarks (and labels). You can change the background to be any Grid or ShadedRect, or scale the whole chart.

If you do provide a background, you can specify the colours of the stripes with 'background.stripeColors'.

Public Attributes

annotations list of callables, will be called with self, xscale, yscale.

background Background for chart area (now Grid or ShadedRect).

behindAxes If true use separate line group.

data Data to be plotted, list of (lists of) x/y tuples.

debug Used only for debugging.

fillColor Color used for background interior of plot area.

gridFirst If true use draw grids before axes.

height Height of the chart.

joinedLines Display data points joined with lines if true.

lineLabelArray explicit array of line label values, must match size of data if present.

lineLabelFormat Formatting string or function used for data point labels.

lineLabelNudge Distance between a data point and its label.

lineLabels Handle to the list of data point labels.

lines Handle of the lines.

reversePlotOrder If true reverse plot order.

scaleFactor Scalefactor to apply to whole drawing.

strokeColor Color used for background border of plot area.

strokeWidth Width plot area border.

width Width of the chart.

x X position of the lower-left corner of the chart.

xValueAxis Handle of the x axis.

y Y position of the lower-left corner of the chart.

yValueAxis Handle of the y axis.

Example

LinePlot(AbstractLineChart)

Line plot with multiple lines.

Both x- and y-axis are value axis (so there are no separate X and Y versions of this class).

Public Attributes

annotations list of callables, will be called with self, xscale, yscale.

background Handle to background object e.g. Rect(0,0,width,height).

behindAxes If true use separate line group.

data Data to be plotted, list of (lists of) x/y tuples.

debug Used only for debugging.

fillColor Color used for background interior of plot area.

gridFirst If true use draw grids before axes.

height Height of the chart.

joinedLines Display data points joined with lines if true.

lineLabelArray explicit array of line label values, must match size of data if present.

lineLabelFormat Formatting string or function used for data point labels.

lineLabelNudge Distance between a data point and its label.

lineLabels Handle to the list of data point labels.

lines Handle of the lines.

reversePlotOrder If true reverse plot order.

strokeColor Color used for background border of plot area.

strokeWidth Width plot area border.

width Width of the chart.

x X position of the lower-left corner of the chart.

xValueAxis Handle of the x axis.

y Y position of the lower-left corner of the chart.

yValueAxis Handle of the y axis.

Example

```
def demo(self):
    """Shows basic use of a line chart."""

    drawing = Drawing(400, 200)

    data = [
        ((1,1), (2,2), (2.5,1), (3,3), (4,5)),
        ((1,2), (2,3), (2.5,2), (3.5,5), (4,6))
    ]

    lp = LinePlot()

    lp.x = 50
    lp.y = 50
    lp.height = 125
    lp.width = 300
    lp.data = data
```

```

LinePlot3D(LinePlot)

Public Attributes

annotations list of callables, will be called with self, xscale, yscale.

background Handle to background object e.g. Rect(0,0,width,height).

behindAxes If true use separate line group.

data Data to be plotted, list of (lists of) x/y tuples.

debug Used only for debugging.

fillColor Color used for background interior of plot area.

gridFirst If true use draw grids before axes.

height Height of the chart.

joinedLines Display data points joined with lines if true.

lineLabelArray explicit array of line label values, must match size of data if present.

lineLabelFormat Formatting string or function used for data point labels.

lineLabelNudge Distance between a data point and its label.

lineLabels Handle to the list of data point labels.

lines Handle of the lines.

reversePlotOrder If true reverse plot order.

strokeColor Color used for background border of plot area.

strokeWidth Width plot area border.

theta_x dx/dz

theta_y dy/dz

width Width of the chart.

x X position of the lower-left corner of the chart.

xValueAxis Handle of the x axis.

y Y position of the lower-left corner of the chart.

yValueAxis Handle of the y axis.

zDepth depth of an individual series

zSpace z gap around series

ScatterPlot(LinePlot)

A scatter plot widget

Public Attributes

annotations list of callables, will be called with self, xscale, yscale.

axisStrokeWidth Stroke width for both axes

axisTickLengths Lenth of the ticks on both axes

background Background color (if any)

behindAxes If true use separate line group.

bottomPadding Padding at bottom of drawing

data Data points - a list of x/y tuples.

debug Used only for debugging.

fillColor Color used for background interior of plot area.

gridFirst If true use draw grids before axes.

height Height of the area inside the axes

joinedLines Display data points joined with lines if true.

labelOffset Space between label and Axis (or other labels)

leftPadding Padding on left of drawing

lineLabelArray explicit array of line label values, must match size of data if present.

lineLabelFormat Formatting string or function used for data point labels.

lineLabelNudge Distance between a data point and its label.

lineLabels Handle to the list of data point labels.

lines Handle of the lines.

outerBorderColor Color of outer border (if any)

outerBorderOn Is there an outer border (continuation of axes)

reversePlotOrder If true reverse plot order.

rightPadding Padding on right of drawing

strokeColor Color used for border of plot area.

strokeWidth Width plot area border.

topPadding Padding at top of drawing

width Width of the area inside the axes

x X position of the lower-left corner of the chart.

xLabel Label for the whole X-Axis

xValueAxis Handle of the x axis.

y Y position of the lower-left corner of the chart.

yLabel Label for the whole Y-Axis

yValueAxis Handle of the y axis.

Example

```
def demo(self,drawing=None):
    if not drawing:
        tx,ty=self._getDrawingDimensions()
        drawing = Drawing(tx,ty)
    drawing.add(self.draw())
    return drawing
```

ShadedPolyFiller(Filler, ShadedPolygon)

Public Attributes

fillColor filler interior color

strokeColor filler edge color

strokeWidth filler edge width

Example

```
def demo(self):
    msg = "demo() must be implemented for each Widget!"
    raise shapes.NotImplementedError, msg
```

Properties of Example Widget

SplitLinePlot (AreaLinePlot)

Public Attributes

annotations list of callables, will be called with self, xscale, yscale.

background Handle to background object e.g. Rect(0,0,width,height).

behindAxes If true use separate line group.

data Data to be plotted, list of (lists of) x/y tuples.

debug Used only for debugging.

fillColor Color used for background interior of plot area.

gridFirst If true use draw grids before axes.

height Height of the chart.

joinedLines Display data points joined with lines if true.

lineLabelArray explicit array of line label values, must match size of data if present.

lineLabelFormat Formatting string or function used for data point labels.

lineLabelNudge Distance between a data point and its label.

lineLabels Handle to the list of data point labels.

lines Handle of the lines.

reversePlotOrder If true reverse plot order.

strokeColor Color used for background border of plot area.

strokeWidth Width plot area border.

width Width of the chart.

x X position of the lower-left corner of the chart.

xValueAxis Handle of the x axis.

y Y position of the lower-left corner of the chart.

yValueAxis Handle of the y axis.

Example

```
def demo(self):

slidebox

Classes

SlideBox(Widget)

Returns a slidebox widget

Public Attributes

background Colour of the background to the drawing (if any)

bottomPadding Padding at bottom of drawing

boxHeight Height of the boxes

boxOutlineColor Colour used to outline the boxes (if any)

boxOutlineWidth Width of the box outline (if any)

boxSpacing Space between the boxes

boxWidth Width of the boxes

endColor Color of last box

labelFillColor Colour for number insides

labelFontName Name of font used for the labels

labelFontSize Size of font used for the labels

labelStrokeColor Colour for for number outlines

leftPadding Padding on left of drawing

numberOfBoxes How many boxes there are

rightPadding Padding on right of drawing

sourceLabelFillColor Colour ink for the 'source' label (bottom right)

sourceLabelFontName Name of font used for the 'source' label

sourceLabelFontSize Font size for the 'source' label

sourceLabelOffset Padding at bottom of drawing

sourceLabelText Text used for the 'source' label (can be empty)

startColor Color of first box

topPadding Padding at top of drawing

triangleFillColor Colour of indicator triangles

triangleHeight Height of indicator triangles

trianglePosition Which box is highlighted by the triangles

triangleStrokeColor Colour of indicator triangle outline

triangleStrokeWidth Colour of indicator triangle outline

triangleWidth Width of indicator triangles

Example

```
def demo(self, drawing=None):
```

```
from reportlab.lib import colors
if not drawing:
    tx,ty=self._getDrawingDimensions()
    drawing = Drawing(tx,ty)
drawing.add(self.draw())
return drawing
```

triangleWidth = 10.771653543307087
```

legends

This will be a collection of legends to be used with charts.

Classes

Legend(Widget)

A simple legend containing rectangular swatches and strings.

The swatches are filled rectangles whenever the respective color object in 'colorNamePairs' is a subclass of Color in reportlab.lib.colors. Otherwise the object passed instead is assumed to have 'x', 'y', 'width' and 'height' attributes.

A legend then tries to set them or catches any error. This lets you plug-in any widget you like as a replacement for the default rectangular swatches.

Strings can be nicely aligned left or right to the swatches.

Public Attributes

alignment Alignment of text with respect to swatches

autoXPadding x Padding between columns if deltax=None

autoYPadding y Padding between rows if deltax=None

boxAnchor Anchor point for the legend area

callout a user callout(self,g,x,y,(color,text))

colEndCallout a user callout(self,g, x, xt, y,width, lWidth)

colorNamePairs List of color/name tuples (color can also be widget)

columnMaximum Max. number of items per column

deltax x-distance between neighbouring swatches

deltay y-distance between neighbouring swatches

dividerColor dividerLines color

dividerDashArray Dash array for dividerLines.

dividerLines If 1 we have dividers between the rows | 2 for extra top | 4 for bottom

dividerOffsX divider lines X offsets

dividerOffsY dividerLines Y offset

dividerWidth dividerLines width

dx Width of swatch rectangle

dxTextSpace Distance between swatch rectangle and text

dy Height of swatch rectangle

fillColor swatches filling color

fontName Font name of the strings

fontSize Font size of the strings

strokeColor Border color of the swatches

strokeWidth Width of the border color of the swatches

subCols subColumn properties

swatchCallout a user swatch callout(self,g,x,y,i,(col,name),swatch)

swatchMarker None, Auto() or makeMarker('Diamond') ...

variColumn If true column widths may vary (default is false)

x x-coordinate of upper-left reference point

y y-coordinate of upper-left reference point

yGap Additional gap between rows

Example

```
def demo(self):
    "Make sample legend."

    d = Drawing(200, 100)

    legend = Legend()
    legend.alignment = 'left'
    legend.x = 0
    legend.y = 100
    legend.dxTextSpace = 5
    items = 'red green blue yellow pink black white'.split()
    items = map(lambda i:(getattr(colors, i), i), items)
    legend.colorNamePairs = items

    d.add(legend, 'legend')

    return d
```

Properties of Example Widget

```
alignment = 'left'
autoXPadding = 5
autoYPadding = 2
boxAnchor = 'nw'
colEndCallout = None
colorNamePairs = [(Color(1,0,0,1), 'red'),

```

LineLegend (Legend)

A subclass of Legend for drawing legends with lines as the swatches rather than rectangles. Useful for lineCharts and linePlots. Should be similar in all other ways the the standard Legend class.

Public Attributes

alignment Alignment of text with respect to swatches

autoXPadding x Padding between columns if deltax=None

autoYPadding y Padding between rows if deltax=None

boxAnchor Anchor point for the legend area

callout a user callout(self,g,x,y,(color,text))

colEndCallout a user callout(self,g, x, xt, y,width, lWidth)

colorNamePairs List of color/name tuples (color can also be widget)

columnMaximum Max. number of items per column

deltax x-distance between neighbouring swatches

deltay y-distance between neighbouring swatches

dividerColor dividerLines color

dividerDashArray Dash array for dividerLines.

dividerLines If 1 we have dividers between the rows | 2 for extra top | 4 for bottom

dividerOffsX divider lines X offsets

dividerOffsY dividerLines Y offset

dividerWidth dividerLines width

dx Width of swatch rectangle

dxTextSpace Distance between swatch rectangle and text

dy Height of swatch rectangle

fillColor swatches filling color

fontName Font name of the strings

fontSize Font size of the strings

strokeColor Border color of the swatches

strokeWidth Width of the border color of the swatches

subCols subColumn properties

swatchCallout a user swatch callout(self,g,x,y,i,(col,name),swatch)

swatchMarker None, Auto() or makeMarker('Diamond') ...

variColumn If true column widths may vary (default is false)

x x-coordinate of upper-left reference point

y y-coordinate of upper-left reference point

yGap Additional gap between rows

Example

```
def demo(self):
    "Make sample legend."

    d = Drawing(200, 100)

    legend = Legend()
    legend.alignment = 'left'
    legend.x = 0
    legend.y = 100
    legend.dxTextSpace = 5
    items = 'red green blue yellow pink black white'.split()
    items = map(lambda i:(getattr(colors, i), i), items)
    legend.colorNamePairs = items

    d.add(legend, 'legend')

    return d
```

Properties of Example Widget

```
alignment = 'left'
autoXPadding = 5
autoYPadding = 2
boxAnchor = 'nw'
colEndCallout = None
colorNamePairs = [(Color(1,0,0,1), 'red'),
                  (Color(0,0,1,1), 'blue'),
                  (Color(0,.501961,0,1), 'green'),
                  (Color(1,.752941,.796078,1), 'pink'),
                  (Color(1,1,0,1), 'yellow')]
columnMaximum = 3
deltax = 75
deltay = 20
dividerColor = Color(0,0,0,1)
dividerDashArray = None
dividerLines = 0
dividerOffsX = (0, 0)
dividerOffsY = 0
dividerWidth = 0.5
dx = 10
dxTextSpace = 10
dy = 2
fillColor = Color(0,0,0,1)
fontName = 'Times-Roman'
fontSize = 10
strokeColor = Color(0,0,0,1)
strokeWidth = 1
subCols = <reportlab.graphics.widgetbase.TypedPropertyCollection instance at 0x804b2f950>
swatchMarker = None
varColumn = 0
x = 0
y = 0
yGap = 0
```

LineSwatch(Widget)

basically a Line with properties added so it can be used in a LineLegend

Public Attributes

height used for line strokeWidth

strokeColor color of swatch line

strokeDashArray dash array for swatch line

width length of swatch line

x x-coordinate for swatch line start point

y y-coordinate for swatch line start point

Example

```
def demo(self):
    msg = "demo() must be implemented for each Widget!"
    raise shapes.NotImplementedError, msg
```

Properties of Example Widget

```
height = 1
strokeColor = Color(1,0,0,1)
strokeDashArray = None
width = 20
x = 0
y = 0
```

Functions

`sample1c(...)`

Make sample legend.

Example

```
def sample1c():
    "Make sample legend."

    d = Drawing(200, 100)

    legend = Legend()
    legend.alignment = 'right'
    legend.x = 0
    legend.y = 100
    legend.dxTextSpace = 5
    items = 'red green blue yellow pink black white'.split()
    items = map(lambda i:(getattr(colors, i), i), items)
    legend.colorNamePairs = items

    d.add(legend, 'legend')

    return d
```

 red	 yellow	 white
 green	 pink	
 blue	 black	

sample2c(...)

Make sample legend.

Example

```
def sample2c():
    "Make sample legend."

    d = Drawing(200, 100)

    legend = Legend()
    legend.alignment = 'right'
    legend.x = 20
    legend.y = 90
    legend.deltax = 60
    legend.dxTextSpace = 10
    legend.columnMaximum = 4
    items = 'red green blue yellow pink black white'.split()
    items = map(lambda i:(getattr(colors, i), i), items)
    legend.colorNamePairs = items

    d.add(legend, 'legend')

    return d
```

	red		pink
	green		black
	blue		white
	yellow		

sample3(...)

Make sample legend with line swatches.

Example

```
def sample3():
    "Make sample legend with line swatches."

    d = Drawing(200, 100)

    legend = LineLegend()
    legend.alignment = 'right'
    legend.x = 20
    legend.y = 90
    legend.deltax = 60
    legend.dxTextSpace = 10
    legend.columnMaximum = 4
    items = 'red green blue yellow pink black white'.split()
    items = map(lambda i:(getattr(colors, i), i), items)
    legend.colorNamePairs = items
    d.add(legend, 'legend')

    return d
```

	red		pink
	green		black
	blue		white
	yellow		

sample3a(...)

Make sample legend with line swatches and dasharrays on the lines.

Example

```
def sample3a():
    "Make sample legend with line swatches and dasharrays on the lines."

```

... red	-- pink
. green	.. black
- blue	white
. yellow	

piecharts

Basic Pie Chart class.

This permits you to customize and pop out individual wedges;
supports elliptical and circular pies.

Classes

AbstractPieChart(PlotArea)

Public Attributes

background Handle to background object e.g. Rect(0,0,width,height).

debug Used only for debugging.

fillColor Color of the plot area interior.

height Height of the chart.

strokeColor Color of the plot area border.

strokeWidth Width plot area border.

width Width of the chart.

x X position of the lower-left corner of the chart.

y Y position of the lower-left corner of the chart.

Example

```
def demo(self):
    msg = "demo() must be implemented for each Widget!"
    raise shapes.NotImplementedError, msg
```

Properties of Example Widget

```
background = None
debug = 0
fillColor = None
height = 85
strokeColor = None
strokeWidth = 1
width = 180
x = 20
y = 10
```

LegendedPie(Pie)

Pie with a two part legend (one editable with swatches, one hidden without swatches).

Public Attributes

background Handle to background object e.g. Rect(0,0,width,height).

bottomPadding Padding at bottom of drawing

checkLabelOverlap If true check and attempt to fix standard label overlaps(default off)

data list of numbers defining wedge sizes; need not sum to 1

debug Used only for debugging.

direction 'clockwise' or 'anticlockwise'

drawLegend If true then create and draw legend

fillColor Color of the plot area interior.

height Height of the chart.

labels optional list of labels to use for each data point

leftPadding Padding on left of drawing

legend1 Handle to legend for pie

legendNumberFormat Formatting routine for number on right hand side of legend.

legendNumberOffset Horizontal space between legend and numbers on r/hand side

legend_data Numbers used on r/hand side of legend (or None)

legend_names Names used in legend (or None)

orderMode None

other_threshold A value for doing threshholding, not used yet.

pieAndLegend_colors Colours used for both swatches and pie

pointerLabelMode

rightPadding Padding on right of drawing

sameRadii If true make x/y radii the same(default off)

simpleLabels If true(default) use String not super duper WedgeLabel

slices collection of wedge descriptor objects

startAngle angle of first slice; like the compass, 0 is due North

strokeColor Color of the plot area border.

strokeWidth Width plot area border.

topPadding Padding at top of drawing

width Width of the chart.

x X position of the lower-left corner of the chart.

xradius X direction Radius

y Y position of the lower-left corner of the chart.

yradius Y direction Radius

Example

```
def demo(self, drawing=None):
    if not drawing:
        tx,ty = self._getDrawingDimensions()
        drawing = Drawing(tx, ty)
    drawing.add(self.draw())

Pie3d(Pie)

Public Attributes

angle_3d The view angle.

background Handle to background object e.g. Rect(0,0,width,height).

checkLabelOverlap If true check and attempt to fix standard label overlaps(default off)

data list of numbers defining wedge sizes; need not sum to 1

debug Used only for debugging.

depth_3d depth of the pie.

direction 'clockwise' or 'anticlockwise'

fillColor Color of the plot area interior.

height Height of the chart.

labels optional list of labels to use for each data point

orderMode None

other_threshold A value for doing threshholding, not used yet.

perspective A flattening parameter.

pointerLabelMode

sameRadii If true make x/y radii the same(default off)

simpleLabels If true(default) use String not super duper WedgeLabel

slices collection of wedge descriptor objects

startAngle angle of first slice; like the compass, 0 is due North

strokeColor Color of the plot area border.

strokeWidth Width plot area border.

width Width of the chart.

x X position of the lower-left corner of the chart.

xradius X direction Radius

y Y position of the lower-left corner of the chart.

yradius Y direction Radius

Example

```
def demo(self):

WedgeLabel (Label)

Public Attributes

angle angle of label: default (0), 90 is vertical, 180 is upside down, etc

bottomPadding padding at bottom of box

boxAnchor anchoring point of the label

boxFillColor the filling color of the box

boxStrokeColor border color of the box

boxStrokeWidth border width

boxTarget one of ('normal','anti','lo','hi')

dx delta x - offset

dy delta y - offset

fillColor label text color

fontName the name of the font used

fontSize the size of the font

height the height of the text

leading

leftPadding padding at left of box

maxWidth maximum width the label can grow to

rightPadding padding at right of box

strokeColor label text border color

strokeWidth label text border width

text the actual text to display

textAnchor the anchoring point of the text inside the label

topPadding padding at top of box

visible True if the label is to be drawn

width the width of the label

x

y

Example

```
def demo(self):

Functions

sample0a(...)

Make a degenerated pie chart with only one slice.

Example

```
def sample0a():
    "Make a degenerated pie chart with only one slice."

    d = Drawing(400, 200)

    pc = Pie()
    pc.x = 150
    pc.y = 50
    pc.data = [10]
    pc.labels = ['a']
    pc.slices.strokeWidth=1#0.5

    d.add(pc)

    return d
```

sample0b(...)

Make a degenerated pie chart with only one slice.

Example

```
def sample0b():  
    "Make a degenerated pie chart with only one slice."  
  
    d = Drawing(400, 200)  
  
    pc = Pie()  
    pc.x = 150  
    pc.y = 50  
    pc.width = 120  
    pc.height = 100  
    pc.data = [10]  
    pc.labels = ['a']  
    pc.slices.strokeWidth=1#0.5  
  
    d.add(pc)  
  
    return d
```

sample1(...)

Make a typical pie chart with with one slice treated in a special way.

Example

```
def sample1():
    "Make a typical pie chart with with one slice treated in a special way."

    d = Drawing(400, 200)

    pc = Pie()
    pc.x = 150
    pc.y = 50
    pc.data = [10, 20, 30, 40, 50, 60]
    pc.labels = ['a', 'b', 'c', 'd', 'e', 'f']

    pc.slices.strokeWidth=1#0.5
    pc.slices[3].popout = 20
    pc.slices[3].strokeWidth = 2
    pc.slices[3].strokeDashArray = [2,2]
    pc.slices[3].labelRadius = 1.75
    pc.slices[3].fontColor = colors.red

    d.add(pc)

    return d
```

sample2(...)

Make a pie chart with nine slices.

Example

```
def sample2():
    "Make a pie chart with nine slices."

    d = Drawing(400, 200)

    pc = Pie()
    pc.x = 125
    pc.y = 25
    pc.data = [0.31, 0.148, 0.108,
               0.076, 0.033, 0.03,
               0.019, 0.126, 0.15]
    pc.labels = ['1', '2', '3', '4', '5', '6', '7', '8', 'X']

    pc.width = 150
    pc.height = 150
    pc.slices.strokeWidth=1#0.5

    pc.slices[0].fillColor = colors.steelblue
    pc.slices[1].fillColor = colors.thistle
    pc.slices[2].fillColor = colors.cornflower
    pc.slices[3].fillColor = colors.lightsteelblue
    pc.slices[4].fillColor = colors.aquamarine
    pc.slices[5].fillColor = colors.cadetblue
    pc.slices[6].fillColor = colors.lightcoral
    pc.slices[7].fillColor = colors.tan
    pc.slices[8].fillColor = colors.darkseagreen

    d.add(pc)

    return d
```

sample3(...)

Make a pie chart with a very slim slice.

Example

```
def sample3():
    "Make a pie chart with a very slim slice."

    d = Drawing(400, 200)

    pc = Pie()
    pc.x = 125
    pc.y = 25

    pc.data = [74, 1, 25]

    pc.width = 150

    return d
```

spider

Spider Chart

Normal use shows variation of 5-10 parameters against some 'norm' or target. When there is more than one series, place the series with the largest numbers first, as it will be overdrawn by each successive one.

Classes

SpiderChart(PlotArea)

Public Attributes

background Handle to background object e.g. Rect(0,0,width,height).

data Data to be plotted, list of (lists of) numbers.

debug Used only for debugging.

direction 'clockwise' or 'anticlockwise'

fillColor Color of the plot area interior.

height Height of the chart.

labels optional list of labels to use for each data point

spokeLabels collection of spoke label descriptor objects

spokes collection of spoke descriptor objects

startAngle angle of first slice; like the compass, 0 is due North

strandLabels collection of strand label descriptor objects

strands collection of strand descriptor objects

strokeColor Color of the plot area border.

strokeWidth Width plot area border.

width Width of the chart.

x X position of the lower-left corner of the chart.

y Y position of the lower-left corner of the chart.

Example

```
def demo(self):
    d = Drawing(200, 200)
    d.add(SpiderChart())
    return d
```

Properties of Example Widget

```
background = None
data = [[10, 12, 14, 16, 14, 12], [6, 8, 10, 12, 9, 11]]

```

StrandLabel (SpokeLabel)

Public Attributes

angle angle of label: default (0), 90 is vertical, 180 is upside down, etc

bottomPadding padding at bottom of box

boxAnchor anchoring point of the label

boxFillColor the filling color of the box

boxStrokeColor border color of the box

boxStrokeWidth border width

boxTarget one of ('normal','anti','lo','hi')

dR radial shift for label

dx delta x - offset

dy delta y - offset

fillColor label text color

fontName the name of the font used

fontSize the size of the font

format Format for the label

height the height of the text

leading

leftPadding padding at left of box

maxWidth maximum width the label can grow to

rightPadding padding at right of box

strokeColor label text border color

strokeWidth label text border width

text the actual text to display

textAnchor the anchoring point of the text inside the label

topPadding padding at top of box

visible True if the label is to be drawn

width the width of the label

x

y

Example

```
def demo(self):
    """This shows a label positioned with its top right corner
    at the top centre of the drawing, and rotated 45 degrees."""

    d = Drawing(200, 100)

    # mark the origin of the label
    d.add(Circle(100,90, 5, fillColor=colors.green))

    lab = Label()
    lab.setOrigin(100,90)
    lab.boxAnchor = 'ne'
```

```
lab.angle = 45
lab.dx = 0
lab.dy = -20
lab.boxStrokeColor = colors.green
lab.setText('Another\nMulti-Line\nString')
d.add(lab)

return d
```

#history <http://www.reportlab.co.uk/cgi-bin/viewcvs.cgi/public/reportlab/trunk/reportlab/graphics/widgets/grids.py>

Classes

DoubleGrid(Widget)

This combines two ordinary Grid objects orthogonal to each other.

Public Attributes

grid0 The first grid component.

grid1 The second grid component.

height The grid's height.

width The grid's width.

x The grid's lower-left x position.

y The grid's lower-left y position.

Example

```
def demo(self):
    D = Drawing(100, 100)
    g = DoubleGrid()
    D.add(g)
    return D
```

Properties of Example Widget

```
grid0.delta = 20
grid0.delta0 = 0
grid0.deltaSteps = []
grid0.fillColor = Color(1,1,1,1)
grid0.height = 100
grid0.orientation = 'vertical'
grid0.stripeColors = [Color(1,0,0,1), Color(0,.501961,0,1), Color(0,0,1,1)]
grid0.strokeColor = Color(0,0,0,1)
grid0.strokeWidth = 1
grid0.useLines = 1
grid0.useRects = 0
grid0.width = 100
grid0.x = 0
grid0.y = 0
grid1.delta = 20
grid1.delta0 = 0
grid1.deltaSteps = []
grid1.fillColor = Color(1,1,1,1)
grid1.height = 100
grid1.orientation = 'horizontal'
grid1.stripeColors = [Color(1,0,0,1), Color(0,.501961,0,1), Color(0,0,1,1)]
```

```
grid1.strokeColor = Color(0,0,0,1)
grid1.strokeWidth = 1
grid1.useLines = 1
grid1.useRects = 0
grid1.width = 100
grid1.x = 0
grid1.y = 0
height = 100
width = 100
x = 0
y = 0
```

Grid(Widget)

This makes a rectangular grid of equidistant stripes.

The grid contains an outer border rectangle, and stripes inside which can be drawn with lines and/or as solid tiles. The drawing order is: outer rectangle, then lines and tiles.

The stripes' width is indicated as 'delta'. The sequence of stripes can have an offset named 'delta0'. Both values need to be positive!

Public Attributes

delta Determines the width/height of the stripes.

delta0 Determines the stripes initial width/height offset.

deltaSteps List of deltas to be used cyclically.

fillColor Background color for entire rectangle.

height The grid's height.

orientation Determines if stripes are vertical or horizontal.

rectStrokeColor Color for outer rect stroke.

rectStrokeWidth Width for outer rect stroke.

stripeColors Colors applied cyclically in the right or upper direction.

strokeColor Color used for lines.

strokeWidth Width used for lines.

useLines Determines if stripes are drawn with lines.

useRects Determines if stripes are drawn with solid rectangles.

width The grid's width.

x The grid's lower-left x position.

y The grid's lower-left y position.

Example

```
def demo(self):
    D = Drawing(100, 100)

    g = Grid()
    D.add(g)

    return D
```

Properties of Example Widget

```
delta = 20
delta0 = 0
deltaSteps = []
fillColor = Color(1,1,1,1)
height = 100
orientation = 'vertical'
stripeColors = [Color(1,0,0,1), Color(0,.501961,0,1), Color(0,0,1,1)]
strokeColor = Color(0,0,0,1)
strokeWidth = 2
useLines = 0
```

```
useRects = 1
width = 100
x = 0
y = 0
```

ShadedPolygon(Widget, LineShape)

Public Attributes

angle Shading angle

cylinderMode True if shading reverses in middle.

fillColorEnd None

fillColorStart None

numShades The number of interpolating colors.

points None

strokeColor None

strokeDashArray a sequence of numbers represents on and off, e.g. (2,1)

strokeLineCap Line cap 0=butt, 1=round 2=square

strokeLineJoin Line join 0=miter, 1=round 2=bevel

strokeMiterLimit miter limit control miter line joins

strokeOpacity The level of transparency of the line, any real number between 0 and 1

strokeOverprint Turn on stroke overprinting

strokeWidth None

Example

```
def demo(self):
    msg = "demo() must be implemented for each Widget!"
    raise shapes.NotImplementedError, msg
```

Properties of Example Widget

```
angle = 90
cylinderMode = 0
fillColorEnd = Color(0,.501961,0,1)
fillColorStart = Color(1,0,0,1)
numShades = 50
points = [-1, -1, 2, 2, 3, -1]
strokeColor = Color(0,0,0,1)
strokeDashArray = None
strokeLineCap = 0
strokeLineJoin = 0
strokeMiterLimit = 0
strokeOpacity = None
strokeWidth = 1
```

ShadedRect (Widget)

This makes a rectangle with shaded colors between two colors.

Colors are interpolated linearly between 'fillColorStart' and 'fillColorEnd', both of which appear at the margins. If 'numShades' is set to one, though, only 'fillColorStart' is used.

Public Attributes

cylinderMode True if shading reverses in middle.

fillColorEnd End value of the color shade.

fillColorStart Start value of the color shade.

height The grid's height.

numShades The number of interpolating colors.

orientation Determines if stripes are vertical or horizontal.

strokeColor Color used for border line.

strokeWidth Width used for lines.

width The grid's width.

x The grid's lower-left x position.

y The grid's lower-left y position.

Example

```
def demo(self):
    D = Drawing(100, 100)
    g = ShadedRect()
    D.add(g)

    return D
```

Properties of Example Widget

```
cylinderMode = 0
fillColorEnd = Color(0,0,0,1)
fillColorStart = Color(1,.752941,.796078,1)
height = 100
numShades = 20
orientation = 'vertical'
strokeColor = Color(0,0,0,1)
strokeWidth = 2
width = 100
x = 0
y = 0
```

flags

This file is a collection of flag graphics as widgets.

All flags are represented at the ratio of 1:2, even where the official ratio for the flag is something else (such as 3:5 for the German national flag). The only exceptions are for where this would look `_very_` wrong, such as the Danish flag whose (ratio is 28:37), or the Swiss flag (which is square).

Unless otherwise stated, these flags are all the 'national flags' of the countries, rather than their state flags, naval flags, ensigns or any other variants. (National flags are the flag flown by civilians of a country and the ones usually used to represent a country abroad. State flags are the variants used by the government and by diplomatic missions overseas).

To check on how close these are to the 'official' representations of flags, check the World Flag Database at <http://www.flags.ndirect.co.uk/>

The flags this file contains are:

EU Members:

United Kingdom, Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Holland (The Netherlands), Spain, Sweden

Others:

USA, Czech Republic, European Union, Switzerland, Turkey, Brazil

(Brazilian flag contributed by Publio da Costa Melo [publio@planetarium.com.br]).

Classes

Flag(`_Symbol`)

This is a generic flag class that all the flags in this file use as a basis.

This class basically provides edges and a tidy-up routine to hide any bits of line that overlap the 'outside' of the flag

possible attributes:

'x', 'y', 'size', 'fillColor'

Public Attributes

border Whether a background is drawn

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor Background color

kind Which flag

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

Star(_Symbol)

This draws a 5-pointed star.

possible attributes:

'x', 'y', 'size', 'fillColor', 'strokeColor'

Public Attributes

angle angle in degrees

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

eventcal

This file is a

Classes

EventCalendar(Widget)

Public Attributes

Example

```
def demo(self):
    msg = "demo() must be implemented for each Widget!"
    raise shapes.NotImplementedError, msg
```

Properties of Example Widget

```
data = []
day = 0
endTime = None
height = 150
startTime = None
timeColWidth = None
trackNames = None
trackRowHeight = 20
width = 300
x = 0
y = 0
```

signsandsymbols

This file is a collection of widgets to produce some common signs and symbols.

Widgets include:

- ETriangle (an equilateral triangle),
- RTriangle (a right angled triangle),
- Octagon,
- Crossbox,
- Tickbox,
- SmileyFace,
- StopSign,
- NoEntry,
- NotAllowed (the red roundel from 'no smoking' signs),
- NoSmoking,
- DangerSign (a black exclamation point in a yellow triangle),
- YesNo (returns a tickbox or a crossbox depending on a testvalue),
- FloppyDisk,
- ArrowOne, and
- ArrowTwo

Classes

ArrowOne (_Symbol)

This widget draws an arrow (style one).

possible attributes:

'x', 'y', 'size', 'fillColor'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

ArrowTwo (ArrowOne)

This widget draws an arrow (style two).

possible attributes:

'x', 'y', 'size', 'fillColor'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

Crossbox(_Symbol)

This draws a black box with a red cross in it - a 'checkbox'.

possible attributes:

'x', 'y', 'size', 'crossColor', 'strokeColor', 'crosswidth'

Public Attributes

crossColor None

crosswidth None

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

DangerSign(_Symbol)

This draws a 'danger' sign: a yellow box with a black exclamation point.

possible attributes:

'x', 'y', 'size', 'strokeColor', 'fillColor', 'strokeWidth'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

ETriangle(_Symbol)

This draws an equilateral triangle.

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

FloppyDisk(_Symbol)

This widget draws an icon of a floppy disk.

possible attributes:

'x', 'y', 'size', 'diskcolor'

Public Attributes

diskColor None

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

NoEntry(_Symbol)

This draws a (British) No Entry sign - a red circle with a white line on it.

possible attributes:

'x', 'y', 'size'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

innerBarColor color of the inner bar

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

NoSmoking(NotAllowed)

This draws a no-smoking sign.

possible attributes:

'x', 'y', 'size'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

NotAllowed(_Symbol)

This draws a 'forbidden' roundel (as used in the no-smoking sign).

possible attributes:

'x', 'y', 'size'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

Octagon(_Symbol)

This widget draws an Octagon.

possible attributes:

'x', 'y', 'size', 'fillColor', 'strokeColor'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

RTriangle(_Symbol)

This draws a right-angled triangle.

possible attributes:

'x', 'y', 'size', 'fillColor', 'strokeColor'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

SmileyFace(_Symbol)

This draws a classic smiley face.

possible attributes:

'x', 'y', 'size', 'fillColor'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

StopSign(_Symbol)

This draws a (British) stop sign.

possible attributes:

'x', 'y', 'size'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

stopColor color of the word stop

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

Tickbox(_Symbol)

This draws a black box with a red tick in it - another 'checkbox'.

possible attributes:

'x', 'y', 'size', 'tickColor', 'strokeColor', 'tickwidth'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

tickColor None

tickwidth None

x symbol x coordinate

y symbol y coordinate

YesNo(_Symbol)

This widget draw a tickbox or crossbox depending on 'testValue'.

If this widget is supplied with a 'True' or 1 as a value for testValue, it will use the tickbox widget. Otherwise, it will produce a crossbox.

possible attributes:

'x', 'y', 'size', 'tickcolor', 'crosscolor', 'testValue'

Public Attributes

crosscolor None

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

testValue None

tickcolor None

x symbol x coordinate

y symbol y coordinate

__Symbol(Widget)

Abstract base widget

possible attributes:

'x', 'y', 'size', 'fillColor', 'strokeColor'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

Classes

TableWidget (Widget)

A two dimensions table of labels

Public Attributes

alignment Alignment of text within cells

borderStrokeColor table border color

borderStrokeWidth border line width

boxAnchor location of the table anchoring point

data a list of list of strings to be displayed in the cells

dividerDashArray Dash array for dividerLines.

fillColor table fill color

fontColor font color

fontName text font in the table

fontSize font size of the table

height table height

horizontalDividerStrokeColor table inner horizontal lines color

horizontalDividerStrokeWidth table inner horizontal lines width

textAnchor Alignment of text within cells

verticalDividerStrokeColor table inner vertical lines color

verticalDividerStrokeWidth table inner vertical lines width

width table width

x x position of left edge of table

y y position of bottom edge of table

Example

```
def demo(self):
    """ returns a sample of this widget with data
    """
    d = Drawing(400, 200)
    t = TableWidget()
    d.add(t, name='table')
