reportlab.graphics

axes

Collection of axes for charts.

The current collection comprises axes for charts using cartesian
coordinate systems. All axes might have tick marks and labels.
There are two dichotomies for axes: one of X and Y flavours and
another of category and value flavours.

Category axes have an ordering but no metric. They are divided
into a number of equal-sized buckets. Their tick marks or labels,
if available, go BETWEEN the buckets, and the labels are placed
below to/left of the X/Y-axis, respectively.

Value axes have an ordering AND metric. They correspond to a nu-
meric quantity. Value axis have a real number quantity associated
with it. The chart tells it where to go.
The most basic axis divides the number line into equal spaces
and has tickmarks and labels associated with each; later we
will add variants where you can specify the sampling
interval.

The charts using axis tell them where the labels should be placed.

Axes of complementary X/Y flavours can be connected to each other
in various ways, i.e. with a specific reference point, like an
x/value axis to a y/value (or category) axis. In this case the
connection can be either at the top or bottom of the former or
at any absolute value (specified in points) or at some value of
the former axes in its own coordinate system.

Classes

AdjYValueAxis(YValueAxis)

A Y-axis applying additional rules.

Depending on the data and some built-in rules, the axis
may choose to adjust its range and origin.

Public Attributes

avoidBoundFrac Fraction of interval to allow above and below.

forceZero Ensure zero in range if true.

gridEnd End of grid lines wrt axis origin

gridStart Start of grid lines wrt axis origin

gridStrokeColor Color of grid lines.

gridStrokeDashArray Dash array used for grid lines.

gridStrokeWidth Width of grid lines.

joinAxis Join both axes if true.

joinAxisMode Mode used for connecting axis ('left', 'right', 'value', 'points', None).

joinAxisPos Position at which to join with other axis.

labelTextFormat Formatting string or function used for axis labels.

labels Handle of the axis labels.

leftAxisOrigShiftIPC Lowest label shift interval ratio.

leftAxisOrigShiftMin Minimum amount to shift.

leftAxisPercent When true add percent sign to label values.

leftAxisSkipLL0 Skip/Keep lowest tick label when true/false. Or skiplist

maximumTicks Maximum number of ticks.

minimumTickSpacing Minimum value for distance between ticks.

rangeRound How to round the axis limits

requiredRange Minimum required value range.

strokeColor Color of axis line and ticks.

strokeDashArray Dash array used for axis line.

strokeWidth Width of axis line and ticks.

tickLeft Tick length left of the axis.

tickRight Tick length right of the axis.

valueMax Maximum value on axis.

valueMin Minimum value on axis.

valueStep Step size used between ticks.

valueSteps List of step sizes used between ticks.

visible Display entire object, if true.

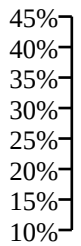
visibleAxis Display axis line, if true.

visibleGrid Display axis grid, if true.

visibleTicks Display axis ticks, if true.

Example

```
def demo(self):
    data = [(10, 20, 30, 42)]
    self.setPosition(100, 10, 80)
    self.configure(data)
    drawing = Drawing(200, 100)
    drawing.add(self)
    return drawing
```



Properties of Example Widget

```
avoidBoundFrac = None
forceZero = 0
gridEnd = 0
gridStart = 0
gridStrokeColor = Color(0,0,0)
gridStrokeDashArray = None
gridStrokeWidth = 0.25
joinAxis = None
joinAxisMode = None
joinAxisPos = None
labelTextFormat = ['10%', '15%', '20%', '25%', '30%', '35%', '40%', '45%']
labels = <reportlab.graphics.widgetbase.TypedPropertyCollection instance at 0x849aa4c>
leftAxisOrigShiftIPC = 0.14999999999999999
leftAxisOrigShiftMin = 12
leftAxisPercent = 1
leftAxisSkipLL0 = 0
maximumTicks = 7
minimumTickSpacing = 10
rangeRound = 'none'
requiredRange = 30
strokeColor = Color(0,0,0)
strokeDashArray = None
strokeWidth = 1
tickLeft = 5
tickRight = 0
valueMax = None
valueMin = None
valueStep = None
valueSteps = [10.0, 15.0, 20.0, 25.0, 30.0, 35.0, 40.0, 45.0]
visible = 1
visibleAxis = 1
visibleGrid = 0
visibleTicks = 1
```

CategoryAxis(Widget)

Abstract category axis, unusable in itself.

Public Attributes

categoryNames List of category names.

gridEnd End of grid lines wrt axis origin

gridStart Start of grid lines wrt axis origin

gridStrokeColor Color of grid lines.

gridStrokeDashArray Dash array used for grid lines.

gridStrokeWidth Width of grid lines.

joinAxis Join both axes if true.

joinAxisPos Position at which to join with other axis.

labelAxisMode Like joinAxisMode, but for the axis labels

labels Handle of the axis labels.

reverseDirection If true reverse category direction.

strokeColor Color of axis line and ticks.

strokeDashArray Dash array used for axis line.

strokeWidth Width of axis line and ticks.

style How common category bars are plotted

visible Display entire object, if true.

visibleAxis Display axis line, if true.

visibleGrid Display axis grid, if true.

visibleTicks Display axis ticks, if true.

NormalDateXValueAxis(XValueAxis)

An X axis applying additional rules.

Depending on the data and some built-in rules, the axis
displays normalDate values as nicely formatted dates.

The client chart should have NormalDate X values.

Public Attributes

avoidBoundFrac Fraction of interval to allow above and below.

bottomAxisLabelSlack Fractional amount used to adjust label spacing

dailyFreq True if we are to assume daily data to be ticked at end of month.

dayOfWeekName Weekday names.

forceEndDate Flag for enforced displaying of last date value.

forceFirstDate Flag for enforced displaying of first date value.

forceZero Ensure zero in range if true.

gridEnd End of grid lines wrt axis origin

gridStart Start of grid lines wrt axis origin

gridStrokeColor Color of grid lines.

gridStrokeDashArray Dash array used for grid lines.

gridStrokeWidth Width of grid lines.

joinAxis Join both axes if true.

joinAxisMode Mode used for connecting axis ('bottom', 'top', 'value', 'points', None).

joinAxisPos Position at which to join with other axis.

labelTextFormat Formatting string or function used for axis labels.

labels Handle of the axis labels.

maximumTicks Maximum number of ticks.

minimumTickSpacing Minimum value for distance between ticks.

monthName Month names.

niceMonth Flag for displaying months 'nicely'.

rangeRound How to round the axis limits

strokeColor Color of axis line and ticks.

strokeDashArray Dash array used for axis line.

strokeWidth Width of axis line and ticks.

tickDown Tick length down the axis.

tickUp Tick length up the axis.

valueMax Maximum value on axis.

valueMin Minimum value on axis.

valueStep Step size used between ticks.

valueSteps List of step sizes used between ticks.

visible Display entire object, if true.

visibleAxis Display axis line, if true.

visibleGrid Display axis grid, if true.

visibleTicks Display axis ticks, if true.

xLabelFormat Label format string (e.g. '{mm}/{yy}') or function.

Example

```
            def demo(self):
                self.setPosition(20, 50, 150)
                self.configure([(10,20,30,40,50)])
                d = Drawing(200, 100)
                d.add(self)
                return d
```

`ValueAxis(Widget)`

Abstract value axis, unusable in itself.

Public Attributes

avoidBoundFrac Fraction of interval to allow above and below.

forceZero Ensure zero in range if true.

gridEnd End of grid lines wrt axis origin

gridStart Start of grid lines wrt axis origin

gridStrokeColor Color of grid lines.

gridStrokeDashArray Dash array used for grid lines.

gridStrokeWidth Width of grid lines.

labelTextFormat Formatting string or function used for axis labels.

labels Handle of the axis labels.

maximumTicks Maximum number of ticks.

minimumTickSpacing Minimum value for distance between ticks.

rangeRound How to round the axis limits

strokeColor Color of axis line and ticks.

strokeDashArray Dash array used for axis line.

strokeWidth Width of axis line and ticks.

valueMax Maximum value on axis.

valueMin Minimum value on axis.

valueStep Step size used between ticks.

valueSteps List of step sizes used between ticks.

visible Display entire object, if true.

visibleAxis Display axis line, if true.

visibleGrid Display axis grid, if true.

visibleTicks Display axis ticks, if true.

`XCategoryAxis(CategoryAxis)`

X/category axis

Public Attributes

categoryNames List of category names.

gridEnd End of grid lines wrt axis origin

gridStart Start of grid lines wrt axis origin

gridStrokeColor Color of grid lines.

gridStrokeDashArray Dash array used for grid lines.

gridStrokeWidth Width of grid lines.

joinAxis Join both axes if true.

joinAxisMode Mode used for connecting axis ('bottom', 'top', 'value', 'points', None).

joinAxisPos Position at which to join with other axis.

labelAxisMode Like joinAxisMode, but for the axis labels

labels Handle of the axis labels.

reverseDirection If true reverse category direction.

strokeColor Color of axis line and ticks.

strokeDashArray Dash array used for axis line.

strokeWidth Width of axis line and ticks.

style How common category bars are plotted

tickDown Tick length down the axis.

tickUp Tick length up the axis.

visible Display entire object, if true.

visibleAxis Display axis line, if true.

visibleGrid Display axis grid, if true.

visibleTicks Display axis ticks, if true.

`XValueAxis(ValueAxis)`

X/value axis

Public Attributes

avoidBoundFrac Fraction of interval to allow above and below.

forceZero Ensure zero in range if true.

gridEnd End of grid lines wrt axis origin

gridStart Start of grid lines wrt axis origin

gridStrokeColor Color of grid lines.

gridStrokeDashArray Dash array used for grid lines.

gridStrokeWidth Width of grid lines.

joinAxis Join both axes if true.

joinAxisMode Mode used for connecting axis ('bottom', 'top', 'value', 'points', None).

joinAxisPos Position at which to join with other axis.

labelTextFormat Formatting string or function used for axis labels.

labels Handle of the axis labels.

maximumTicks Maximum number of ticks.

minimumTickSpacing Minimum value for distance between ticks.

rangeRound How to round the axis limits

strokeColor Color of axis line and ticks.

strokeDashArray Dash array used for axis line.

strokeWidth Width of axis line and ticks.

tickDown Tick length down the axis.

tickUp Tick length up the axis.

valueMax Maximum value on axis.

valueMin Minimum value on axis.

valueStep Step size used between ticks.

valueSteps List of step sizes used between ticks.

visible Display entire object, if true.

visibleAxis Display axis line, if true.

visibleGrid Display axis grid, if true.

visibleTicks Display axis ticks, if true.

Example

```
            def demo(self):
                self.setPosition(20, 50, 150)
                self.configure([(10,20,30,40,50)])
                d = Drawing(200, 100)
                d.add(self)
                return d
```

Properties of Example Widget

```
        avoidBoundFrac = None
        forceZero = 0
        gridEnd = 0
        gridStart = 0

        visibleAxis = 1
        visibleGrid = 0
        visibleTicks = 1
```

YCategoryAxis(CategoryAxis)

Y/category axis

Public Attributes

categoryNames List of category names.

gridEnd End of grid lines wrt axis origin

gridStart Start of grid lines wrt axis origin

gridStrokeColor Color of grid lines.

gridStrokeDashArray Dash array used for grid lines.

gridStrokeWidth Width of grid lines.

joinAxis Join both axes if true.

joinAxisMode Mode used for connecting axis ('left', 'right', 'value', 'points', None).

joinAxisPos Position at which to join with other axis.

labelAxisMode Like joinAxisMode, but for the axis labels

labels Handle of the axis labels.

reverseDirection If true reverse category direction.

strokeColor Color of axis line and ticks.

strokeDashArray Dash array used for axis line.

strokeWidth Width of axis line and ticks.

style How common category bars are plotted

tickLeft Tick length left of the axis.

tickRight Tick length right of the axis.

visible Display entire object, if true.

visibleAxis Display axis line, if true.

visibleGrid Display axis grid, if true.

visibleTicks Display axis ticks, if true.

YValueAxis(ValueAxis)

Y/value axis

Public Attributes

avoidBoundFrac Fraction of interval to allow above and below.

forceZero Ensure zero in range if true.

gridEnd End of grid lines wrt axis origin

gridStart Start of grid lines wrt axis origin

gridStrokeColor Color of grid lines.

gridStrokeDashArray Dash array used for grid lines.

gridStrokeWidth Width of grid lines.

joinAxis Join both axes if true.

joinAxisMode Mode used for connecting axis ('left', 'right', 'value', 'points', None).

joinAxisPos Position at which to join with other axis.

labelTextFormat Formatting string or function used for axis labels.

labels Handle of the axis labels.

maximumTicks Maximum number of ticks.

minimumTickSpacing Minimum value for distance between ticks.

rangeRound How to round the axis limits

strokeColor Color of axis line and ticks.

strokeDashArray Dash array used for axis line.

strokeWidth Width of axis line and ticks.

tickLeft Tick length left of the axis.

tickRight Tick length right of the axis.

valueMax Maximum value on axis.

valueMin Minimum value on axis.

valueStep Step size used between ticks.

valueSteps List of step sizes used between ticks.

visible Display entire object, if true.

visibleAxis Display axis line, if true.

visibleGrid Display axis grid, if true.

visibleTicks Display axis ticks, if true.

Example

```
            def demo(self):
                data = [(10, 20, 30, 42)]
                self.setPosition(100, 10, 80)
                self.configure(data)

```

Functions

sample0a(...)

Sample drawing with one xcat axis and two buckets.

Example

```
def sample0a():
    "Sample drawing with one xcat axis and two buckets."
    drawing = Drawing(400, 200)
    data = [(10, 20)]
    xAxis = XCategoryAxis()
    xAxis.setPosition(75, 75, 300)
    xAxis.configure(data)
    xAxis.categoryNames = ['Ying', 'Yang']
    xAxis.labels.boxAnchor = 'n'
    drawing.add(xAxis)
    return drawing
```

sample0b(...)

Sample drawing with one xcat axis and one bucket only.

Example

```
def sample0b():
    "Sample drawing with one xcat axis and one bucket only."
    drawing = Drawing(400, 200)
    data = [(10,)]
    xAxis = XCategoryAxis()
    xAxis.setPosition(75, 75, 300)
    xAxis.configure(data)
    xAxis.categoryNames = ['Ying']
    xAxis.labels.boxAnchor = 'n'
    drawing.add(xAxis)
    return drawing
```

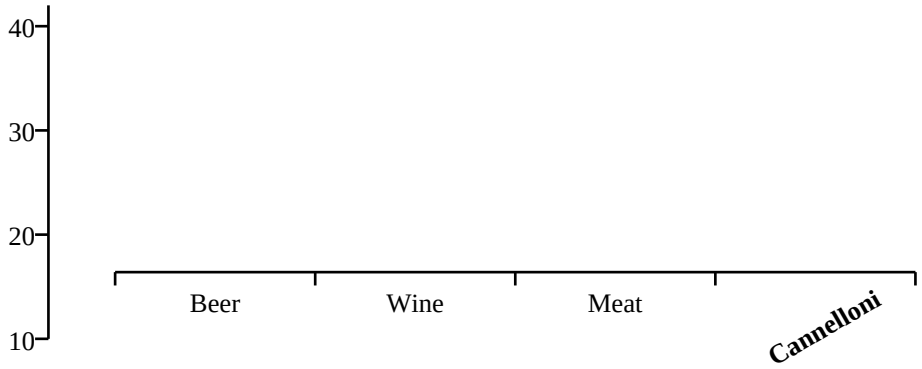
Ying

sample1(...)

Sample drawing containing two unconnected axes.

Example

```
def sample1():
    "Sample drawing containing two unconnected axes."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    xAxis = XCategoryAxis()
    xAxis.setPosition(75, 75, 300)
    xAxis.configure(data)
    xAxis.categoryNames = ['Beer','Wine','Meat','Cannelloni']
    xAxis.labels.boxAnchor = 'n'
    xAxis.labels[3].dy = -15
    xAxis.labels[3].angle = 30
    xAxis.labels[3].fontName = 'Times-Bold'
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

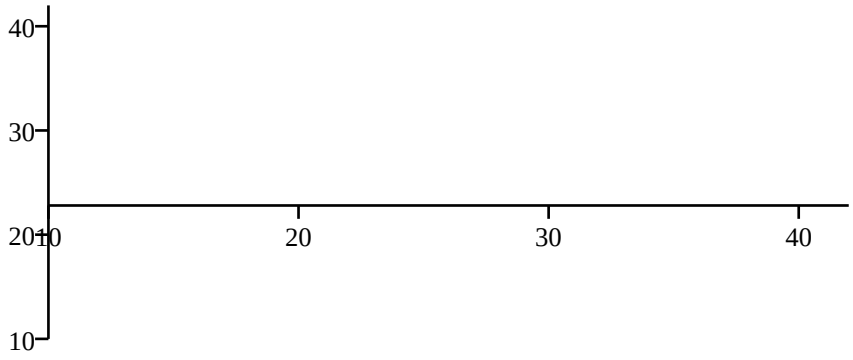


sample4a(...)

Sample drawing, xvalue/yvalue axes, y connected at 100 pts to x.

Example

```
def sample4a():
    "Sample drawing, xvalue/yvalue axes, y connected at 100 pts to x."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    xAxis = XValueAxis()
    xAxis._length = 300
    xAxis.joinAxis = yAxis
    xAxis.joinAxisMode = 'points'
    xAxis.joinAxisPos = 100
    xAxis.configure(data)
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

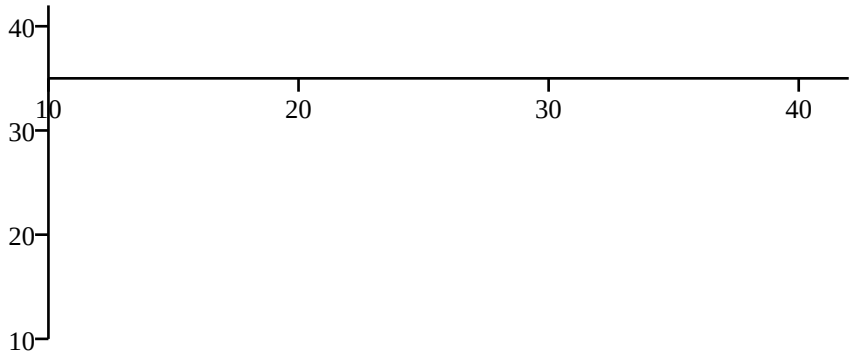


sample4b(...)

Sample drawing, xvalue/yvalue axes, y connected at value 35 of x.

Example

```
def sample4b():
    "Sample drawing, xvalue/yvalue axes, y connected at value 35 of x."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    xAxis = XValueAxis()
    xAxis._length = 300
    xAxis.joinAxis = yAxis
    xAxis.joinAxisMode = 'value'
    xAxis.joinAxisPos = 35
    xAxis.configure(data)
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

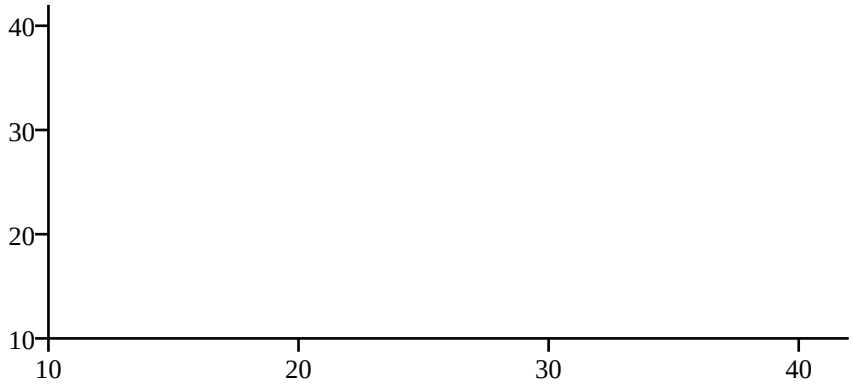


sample4c(...)

Sample drawing, xvalue/yvalue axes, y connected to bottom of x.

Example

```
def sample4c():
    "Sample drawing, xvalue/yvalue axes, y connected to bottom of x."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    xAxis = XValueAxis()
    xAxis._length = 300
    xAxis.joinAxis = yAxis
    xAxis.joinAxisMode = 'bottom'
    xAxis.configure(data)
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

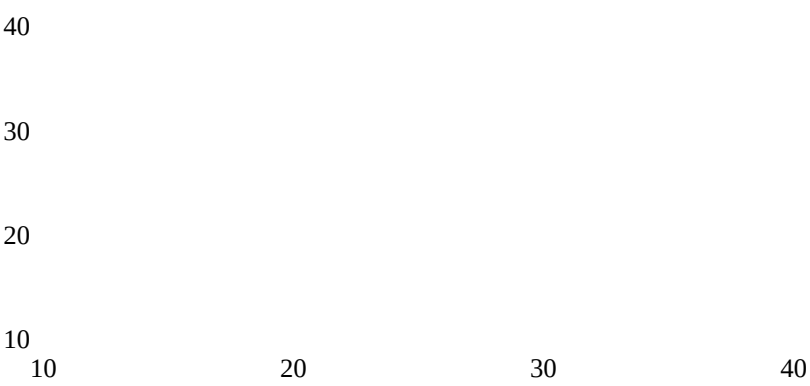


sample4c1(...)

xvalue/yvalue axes, without drawing axis lines/ticks.

Example

```
def sample4c1():
    "xvalue/yvalue axes, without drawing axis lines/ticks."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    yAxis.visibleAxis = 0
    yAxis.visibleTicks = 0
    xAxis = XValueAxis()
    xAxis._length = 300
    xAxis.joinAxis = yAxis
    xAxis.joinAxisMode = 'bottom'
    xAxis.configure(data)
    xAxis.visibleAxis = 0
    xAxis.visibleTicks = 0
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

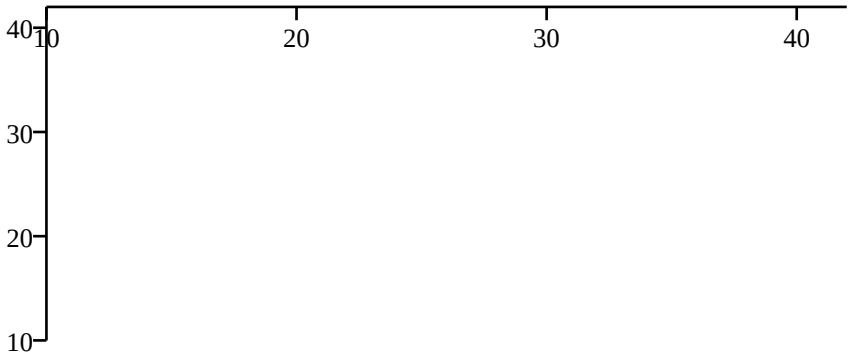


sample4d(...)

Sample drawing, xvalue/yvalue axes, y connected to top of x.

Example

```
def sample4d():
    "Sample drawing, xvalue/yvalue axes, y connected to top of x."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    xAxis = XValueAxis()
    xAxis._length = 300
    xAxis.joinAxis = yAxis
    xAxis.joinAxisMode = 'top'
    xAxis.configure(data)
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

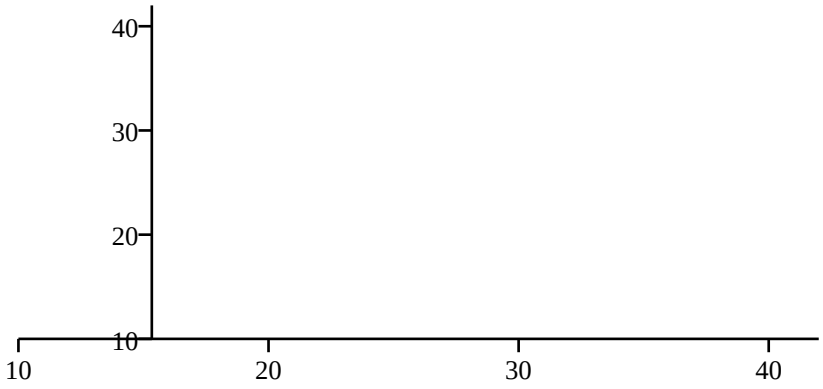


sample5a(...)

Sample drawing, xvalue/yvalue axes, y connected at 100 pts to x.

Example

```
def sample5a():
    "Sample drawing, xvalue/yvalue axes, y connected at 100 pts to x."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    xAxis = XValueAxis()
    xAxis.setPosition(50, 50, 300)
    xAxis.configure(data)
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.joinAxis = xAxis
    yAxis.joinAxisMode = 'points'
    yAxis.joinAxisPos = 100
    yAxis.configure(data)
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

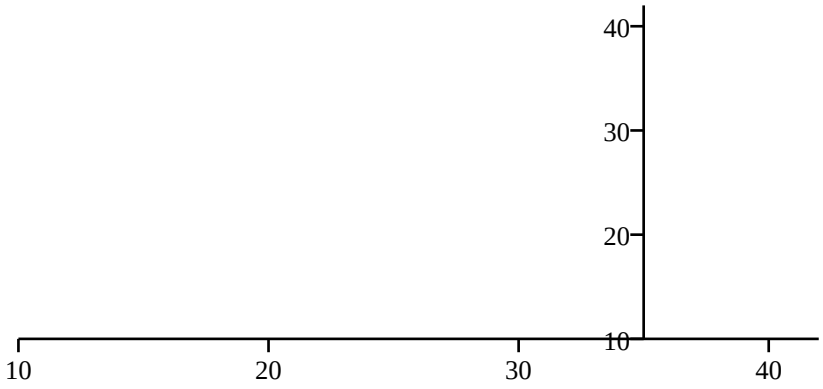


sample5b(...)

Sample drawing, xvalue/yvalue axes, y connected at value 35 of x.

Example

```
def sample5b():
    "Sample drawing, xvalue/yvalue axes, y connected at value 35 of x."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    xAxis = XValueAxis()
    xAxis.setPosition(50, 50, 300)
    xAxis.configure(data)
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.joinAxis = xAxis
    yAxis.joinAxisMode = 'value'
    yAxis.joinAxisPos = 35
    yAxis.configure(data)
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```



sample5c(...)

Sample drawing, xvalue/yvalue axes, y connected at right of x.

Example

```
def sample5c():
    "Sample drawing, xvalue/yvalue axes, y connected at right of x."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    xAxis = XValueAxis()

    return drawing
```

barcharts

This module defines a variety of Bar Chart components.

The basic flavors are Side-by-side, available in horizontal and vertical versions.

Stacked and percentile bar charts to follow...

Classes

BarChart(PlotArea)

Abstract base class, unusable by itself.

Public Attributes

background Handle to background object.

barLabelCallOut Callout function(label) label._callOutInfo = (self,g,rowNo,colNo,x,y,width,height,x00,y00,x0,y0)

barLabelFormat Formatting string or function used for bar labels.

barLabels Handle to the list of bar labels.

barSpacing Width between individual bars.

barWidth The width of an individual bar.

bars Handle of the individual bars.

categoryAxis Handle of the category axis.

data Data to be plotted, list of (lists of) numbers.

debug Used only for debugging.

fillColor Color of the plot area interior.

groupSpacing Width between groups of bars.

height Height of the chart.

naLabel Label to use for N/A values.

reversePlotOrder If true, reverse common category plot order.

strokeColor Color of the plot area border.

strokeWidth Width plot area border.

useAbsolute Flag to use absolute spacing values.

valueAxis Handle of the value axis.

width Width of the chart.

x X position of the lower-left corner of the chart.

y Y position of the lower-left corner of the chart.

HorizontalBarChart(BarChart)

Horizontal bar chart with multiple side-by-side bars.

Public Attributes

background Handle to background object.

barLabelCallOut Callout function(label) label._callOutInfo = (self,g,rowNo,colNo,x,y,width,height,x00,y00,x0,y0)

barLabelFormat Formatting string or function used for bar labels.

barLabels Handle to the list of bar labels.

barSpacing Width between individual bars.

barWidth The width of an individual bar.

bars Handle of the individual bars.

categoryAxis Handle of the category axis.

data Data to be plotted, list of (lists of) numbers.

debug Used only for debugging.

fillColor Color of the plot area interior.

groupSpacing Width between groups of bars.

height Height of the chart.

naLabel Label to use for N/A values.

reversePlotOrder If true, reverse common category plot order.

strokeColor Color of the plot area border.

strokeWidth Width plot area border.

useAbsolute Flag to use absolute spacing values.

valueAxis Handle of the value axis.

width Width of the chart.

x X position of the lower-left corner of the chart.

y Y position of the lower-left corner of the chart.

Example

```
            def demo(self):
                """Shows basic use of a bar chart"""
                if self.__class__.__name__=='BarChart':
                    raise NotImplementedError, 'Abstract Class BarChart has no demo'

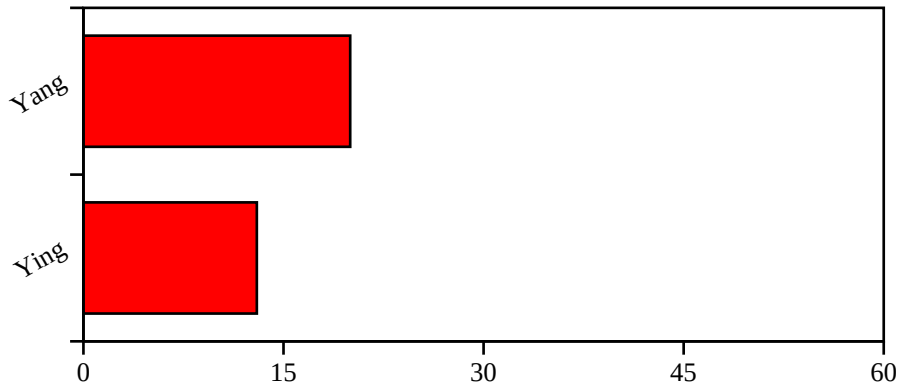
Functions

sampleH0a(...)

Make a slightly pathologic bar chart with only TWO data items.

Example

```
def sampleH0a():
    "Make a slightly pathologic bar chart with only TWO data items."
    drawing = Drawing(400, 200)
    data = [(13, 20)]
    bc = HorizontalBarChart()
    bc.x = 50
    bc.y = 50
    bc.height = 125
    bc.width = 300
    bc.data = data
    bc.strokeColor = colors.black
    bc.valueAxis.valueMin = 0
    bc.valueAxis.valueMax = 60
    bc.valueAxis.valueStep = 15
    bc.categoryAxis.labels.boxAnchor = 'se'
    bc.categoryAxis.labels.angle = 30
    bc.categoryAxis.categoryNames = ['Ying', 'Yang']
    drawing.add(bc)
    return drawing
```

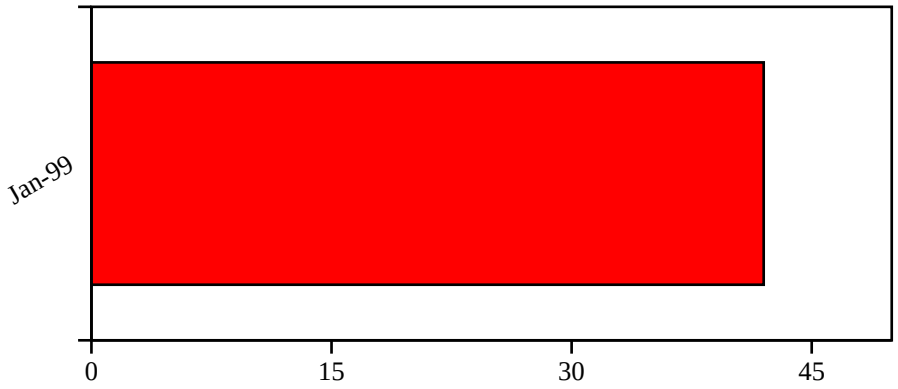


sampleH0b(...)

Make a pathologic bar chart with only ONE data item.

Example

```
def sampleH0b():
    "Make a pathologic bar chart with only ONE data item."
    drawing = Drawing(400, 200)
    data = [(42,)]
    bc = HorizontalBarChart()
    bc.x = 50
    bc.y = 50
    bc.height = 125
    bc.width = 300
    bc.data = data
    bc.strokeColor = colors.black
    bc.valueAxis.valueMin = 0
    bc.valueAxis.valueMax = 50
    bc.valueAxis.valueStep = 15
    bc.categoryAxis.labels.boxAnchor = 'se'
    bc.categoryAxis.labels.angle = 30
    bc.categoryAxis.categoryNames = ['Jan-99']
    drawing.add(bc)
    return drawing
```



sampleH0c(...)

Make a really pathologic bar chart with NO data items at all!

Example

```
def sampleH0c():
    "Make a really pathologic bar chart with NO data items at all!"
    drawing = Drawing(400, 200)
    data = [()]
    bc = HorizontalBarChart()
    bc.x = 50
    bc.y = 50
    bc.height = 125
    bc.width = 300
    bc.data = data
    bc.strokeColor = colors.black
    bc.valueAxis.valueMin = 0

    bc.categoryAxis.labels.dy = -5
    bc.categoryAxis.categoryNames = ['Ying', 'Yang']
    drawing.add(bc)
    return drawing
```

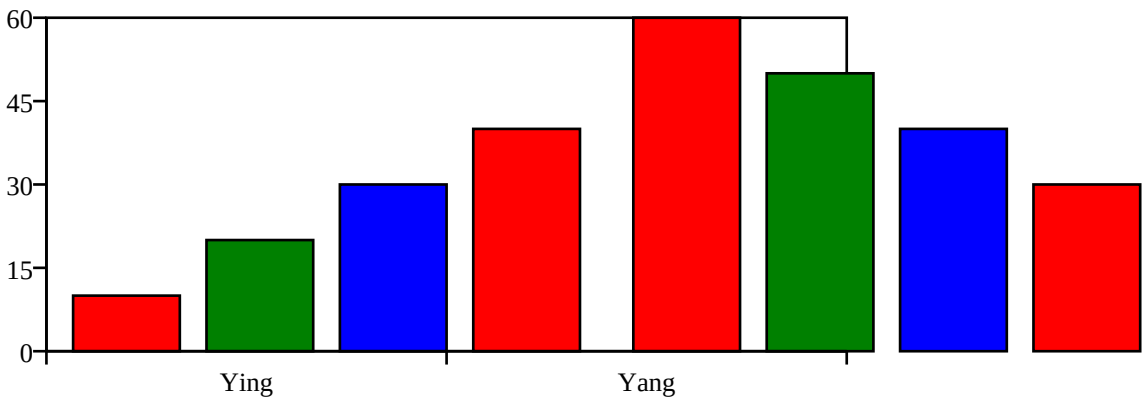
sampleV5c4(...)

Make sampe simple bar chart but with absolute spacing.

Example

```
def sampleV5c4():
    "Make sampe simple bar chart but with absolute spacing."
    drawing = Drawing(400, 200)
    data = dataSample5
    bc = VerticalBarChart()
    bc.x = 50
    bc.y = 50
    bc.height = 125
    bc.width = 300
    bc.data = data
    bc.strokeColor = colors.black
    bc.useAbsolute = 1
    bc.barWidth = 40
    bc.groupSpacing = 20
    bc.barSpacing = 10
    bc.valueAxis.valueMin = 0
    bc.valueAxis.valueMax = 60
    bc.valueAxis.valueStep = 15
    bc.categoryAxis.labels.boxAnchor = 'n'
    bc.categoryAxis.labels.dy = -5
    bc.categoryAxis.categoryNames = ['Ying', 'Yang']
    drawing.add(bc)
    return drawing
```



legends

This will be a collection of legends to be used with charts.

Classes

Legend(Widget)

A simple legend containing rectangular swatches and strings.

The swatches are filled rectangles whenever the respective
color object in 'colorNamePairs' is a subclass of Color in
reportlab.lib.colors. Otherwise the object passed instead is
assumed to have 'x', 'y', 'width' and 'height' attributes.
A legend then tries to set them or catches any error. This
lets you plug-in any widget you like as a replacement for
the default rectangular swatches.

Strings can be nicely aligned left or right to the swatches.

Public Attributes

alignment Alignment of text with respect to swatches

autoXPadding x Padding between columns if deltax=None

autoYPadding y Padding between rows if deltay=None

callout a user callout(self,g,x,y,(color,text))

colorNamePairs List of color/name tuples (color can also be widget)

columnMaximum Max. number of items per column

deltax x-distance between neighbouring swatches

deltay y-distance between neighbouring swatches

dx Width of swatch rectangle

dxTextSpace Distance between swatch rectangle and text

dy Height of swatch rectangle

fillColor

fontName Font name of the strings

fontSize Font size of the strings

strokeColor Border color of the swatches

strokeWidth Width of the border color of the swatches

x x-coordinate of upper-left reference point

y y-coordinate of upper-left reference point

Example

```
            def demo(self):
                "Make sample legend."
                d = Drawing(200, 100)
                legend = Legend()
```

```
        legend.alignment = 'left'
        legend.x = 0
        legend.y = 100
        legend.dxTextSpace = 5
        items = string.split('red green blue yellow pink black white', ' ')
        items = map(lambda i:(getattr(colors, i), i), items)
        legend.colorNamePairs = items
        d.add(legend, 'legend')
        return d
```

Properties of Example Widget

```
alignment = 'left'
autoXPadding = 5
autoYPadding = 2
colorNamePairs = [(Color(1,0,0), 'red'),
                  (Color(0,0,1), 'blue'),
                  (Color(0,.501961,0), 'green'),
                  (Color(1,.752941,.796078), 'pink'),
                  (Color(1,1,0), 'yellow')]
columnMaximum = 3
deltax = 75
deltay = 20
dx = 10
dxTextSpace = 10
dy = 10
fillColor = Color(0,0,0)
fontName = 'Times-Roman'
fontSize = 10
strokeColor = Color(0,0,0)
strokeWidth = 1
x = 0
y = 0
```

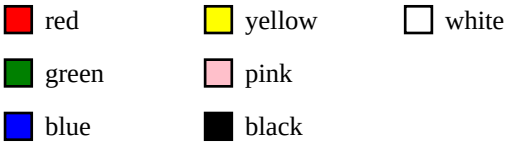
Functions

sample1c(...)

Make sample legend.

Example

```
def sample1c():
    "Make sample legend."
    d = Drawing(200, 100)
    legend = Legend()
    legend.alignment = 'right'
    legend.x = 0
    legend.y = 100
    legend.dxTextSpace = 5
    items = string.split('red green blue yellow pink black white', ' ')
    items = map(lambda i:(getattr(colors, i), i), items)
    legend.colorNamePairs = items
    d.add(legend, 'legend')
    return d
```

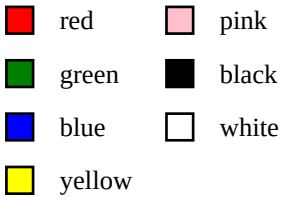


sample2c(...)

Make sample legend.

Example

```
def sample2c():
    "Make sample legend."
    d = Drawing(200, 100)
    legend = Legend()
    legend.alignment = 'right'
    legend.x = 20
    legend.y = 90
    legend.deltax = 60
    legend.dxTextSpace = 10
    legend.columnMaximum = 4
    items = string.split('red green blue yellow pink black white', ' ')
    items = map(lambda i:(getattr(colors, i), i), items)
    legend.colorNamePairs = items
    d.add(legend, 'legend')
    return d
```



linecharts

This modules defines a very preliminary Line Chart example.

Classes

HorizontalLineChart(LineChart)

Line chart with multiple lines.

A line chart is assumed to have one category and one value axis.
Despite its generic name this particular line chart class has
a vertical value axis and a horizontal category one. It may
evolve into individual horizontal and vertical variants (like
with the existing bar charts).

Available attributes are:

x: x-position of lower-left chart origin
y: y-position of lower-left chart origin
width: chart width
height: chart height

useAbsolute: disables auto-scaling of chart elements (?)
lineLabelNudge: distance of data labels to data points
lineLabels: labels associated with data values
lineLabelFormat: format string or callback function
groupSpacing: space between categories

joinedLines: enables drawing of lines

strokeColor: color of chart lines (?)
fillColor: color for chart background (?)
lines: style list, used cyclically for data series

valueAxis: value axis object
categoryAxis: category axis object
categoryNames: category names

data: chart data, a list of data series of equal length

Public Attributes

background Handle to background object.

categoryAxis Handle of the category axis.

categoryNames List of category names.

data Data to be plotted, list of (lists of) numbers.

debug Used only for debugging.

fillColor Color of the plot area interior.

groupSpacing ? - Likely to disappear.

height Height of the chart.

joinedLines Display data points joined with lines if true.

lineLabelFormat Formatting string or function used for data point labels.

lineLabelNudge Distance between a data point and its label.

lineLabels Handle to the list of data point labels.

lines Handle of the lines.

strokeColor Color of the plot area border.

strokeWidth Width plot area border.

useAbsolute Flag to use absolute spacing values.

valueAxis Handle of the value axis.

width Width of the chart.

x X position of the lower-left corner of the chart.

y Y position of the lower-left corner of the chart.

Example

```
def demo(self):
    """Shows basic use of a line chart."""
    drawing = Drawing(200, 100)
    data = [
            (13, 5, 20, 22, 37, 45, 19, 4),
            (14, 10, 21, 28, 38, 46, 25, 5)
            ]
    lc = HorizontalLineChart()
    lc.x = 20
    lc.y = 10
    lc.height = 85
    lc.width = 170
    lc.data = data
    lc.lines.symbol = makeMarker('Circle')
    drawing.add(lc)
    return drawing
```

LineChart(PlotArea)

Public Attributes

background Handle to background object.

debug Used only for debugging.

fillColor Color of the plot area interior.

height Height of the chart.

strokeColor Color of the plot area border.

strokeWidth Width plot area border.

width Width of the chart.

x X position of the lower-left corner of the chart.

y Y position of the lower-left corner of the chart.

Example

```
            def demo(self):
                msg = "demo() must be implemented for each Widget!"
                raise shapes.NotImplementedError, msg
```

Properties of Example Widget

```

        fillColor = None
        height = 85
        strokeColor = None
        strokeWidth = 1
        width = 180
        x = 20
        y = 10
```

SampleHorizontalLineChart(HorizontalLineChart)

Sample class overwriting one method to draw additional horizontal lines.

Public Attributes

background Handle to background object.

categoryAxis Handle of the category axis.

categoryNames List of category names.

data Data to be plotted, list of (lists of) numbers.

debug Used only for debugging.

fillColor Color of the plot area interior.

groupSpacing ? - Likely to disappear.

height Height of the chart.

joinedLines Display data points joined with lines if true.

lineLabelFormat Formatting string or function used for data point labels.

lineLabelNudge Distance between a data point and its label.

lineLabels Handle to the list of data point labels.

lines Handle of the lines.

strokeColor Color of the plot area border.

strokeWidth Width plot area border.

useAbsolute Flag to use absolute spacing values.

valueAxis Handle of the value axis.

width Width of the chart.

x X position of the lower-left corner of the chart.

y Y position of the lower-left corner of the chart.

Example

```
            def demo(self):
                """Shows basic use of a line chart."""
                drawing = Drawing(200, 100)

```

lineplots

This module defines a very preliminary Line Plot example.

Classes

GridLinePlot(LinePlot)

A customized version of LinePlot.
It uses NormalDateXValueAxis() and AdjYValueAxis() for the X and Y axes.
The chart has a default grid background with thin horizontal lines
aligned with the tickmarks (and labels). You can change the back-
ground to be any Grid or ShadedRect, or scale the whole chart.
If you do provide a background, you can specify the colours of the
stripes with 'background.stripeColors'.

Public Attributes

background Background for chart area (now Grid or ShadedRect).

data Data to be plotted, list of (lists of) x/y tuples.

debug Used only for debugging.

fillColor Color used for background interior of plot area.

height Height of the chart.

joinedLines Display data points joined with lines if true.

lineLabelFormat Formatting string or function used for data point labels.

lineLabelNudge Distance between a data point and its label.

lineLabels Handle to the list of data point labels.

lines Handle of the lines.

reversePlotOrder If true reverse plot order.

scaleFactor Scalefactor to apply to whole drawing.

strokeColor Color used for background border of plot area.

strokeWidth Width plot area border.

width Width of the chart.

x X position of the lower-left corner of the chart.

xValueAxis Handle of the x axis.

y Y position of the lower-left corner of the chart.

yValueAxis Handle of the y axis.

Example

```
            def demo(self,drawing=None):
                from reportlab.lib import colors
                if not drawing:

```

LinePlot(PlotArea)

Line plot with multiple lines.

Both x- and y-axis are value axis (so there are no seperate
X and Y versions of this class).

Public Attributes

background Handle to background object.

data Data to be plotted, list of (lists of) x/y tuples.

debug Used only for debugging.

fillColor Color used for background interior of plot area.

height Height of the chart.

joinedLines Display data points joined with lines if true.

lineLabelFormat Formatting string or function used for data point labels.

lineLabelNudge Distance between a data point and its label.

lineLabels Handle to the list of data point labels.

lines Handle of the lines.

reversePlotOrder If true reverse plot order.

strokeColor Color used for background border of plot area.

strokeWidth Width plot area border.

width Width of the chart.

x X position of the lower-left corner of the chart.

xValueAxis Handle of the x axis.

y Y position of the lower-left corner of the chart.

yValueAxis Handle of the y axis.

Example

```
            def demo(self):
                """Shows basic use of a line chart."""
                drawing = Drawing(400, 200)

ScatterPlot(LinePlot)

A scatter plot widget

Public Attributes

axisStrokeWidth Stroke width for both axes

axisTickLengths Lenth of the ticks on both axes

background Background color (if any)

bottomPadding Padding at bottom of drawing

data Data points - a list of x/y tuples.

debug Used only for debugging.

fillColor Color used for background interior of plot area.

height Height of the area inside the axes

joinedLines Display data points joined with lines if true.

labelOffset Space between label and Axis (or other labels)

leftPadding Padding on left of drawing

lineLabelFormat Formatting string or function used for data point labels.

lineLabelNudge Distance between a data point and its label.

lineLabels Handle to the list of data point labels.

lines Handle of the lines.

outerBorderColor Color of outer border (if any)

outerBorderOn Is there an outer border (continuation of axes)

reversePlotOrder If true reverse plot order.

rightPadding Padding on right of drawing

strokeColor Color used for border of plot area.

strokeWidth Width plot area border.

topPadding Padding at top of drawing

width Width of the area inside the axes

x X position of the lower-left corner of the chart.

xLabel Label for the whole X-Axis

xValueAxis Handle of the x axis.

y Y position of the lower-left corner of the chart.

yLabel Label for the whole Y-Axis

yValueAxis Handle of the y axis.

Example

```

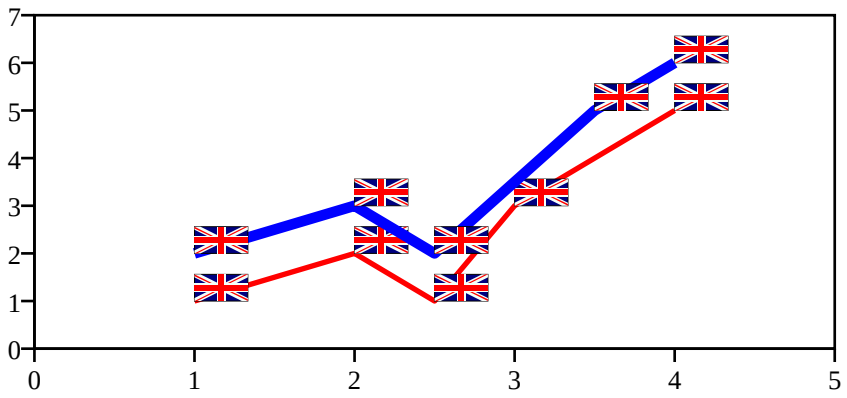
Functions

sample1a(...)

A line plot with non-equidistant points in x-axis.

Example

```
def sample1a():
    "A line plot with non-equidistant points in x-axis."
    drawing = Drawing(400, 200)
    data = [
            ((1,1), (2,2), (2.5,1), (3,3), (4,5)),
            ((1,2), (2,3), (2.5,2), (3.5,5), (4,6))
        ]
    lp = LinePlot()
    lp.x = 50
    lp.y = 50
    lp.height = 125
    lp.width = 300
    lp.data = data
    lp.joinedLines = 1
    lp.strokeColor = colors.black
    lp.lines.symbol = makeMarker('UK_Flag')
    lp.lines[0].strokeWidth = 2
    lp.lines[1].strokeWidth = 4
    lp.xValueAxis.valueMin = 0
    lp.xValueAxis.valueMax = 5
    lp.xValueAxis.valueStep = 1
    lp.yValueAxis.valueMin = 0
    lp.yValueAxis.valueMax = 7
    lp.yValueAxis.valueStep = 1
    drawing.add(lp)
    return drawing
```



sample1b(...)

A line plot with non-equidistant points in x-axis.

Example

```
def sample1b():
    "A line plot with non-equidistant points in x-axis."
    drawing = Drawing(400, 200)
    data = [
            ((1,1), (2,2), (2.5,1), (3,3), (4,5)),
            ((1,2), (2,3), (2.5,2), (3.5,5), (4,6))
        ]
    lp = LinePlot()
    lp.x = 50
    lp.y = 50

piecharts

Basic Pie Chart class.

This permits you to customize and pop out individual wedges;
supports elliptical and circular pies.

Classes

LegendedPie(Pie)

Pie with a two part legend (one editable with swatches, one hidden without swatches).

Public Attributes

bottomPadding Padding at bottom of drawing

data list of numbers defining wedge sizes; need not sum to 1

direction 'clockwise' or 'anticlockwise'

drawLegend If true then create and draw legend

height height of pie bounding box. Need not be same as height.

labels optional list of labels to use for each data point

leftPadding Padding on left of drawing

legend1 Handle to legend for pie

legendNumberFormat Formatting routine for number on right hand side of legend.

legendNumberOffset Horizontal space between legend and numbers on r/hand side

legend_data Numbers used on r/hand side of legend (or None)

legend_names Names used in legend (or None)

pieAndLegend_colors Colours used for both swatches and pie

rightPadding Padding on right of drawing

slices collection of wedge descriptor objects

startAngle angle of first slice; like the compass, 0 is due North

topPadding Padding at top of drawing

width width of pie bounding box. Need not be same as width.

x X position of the chart within its container.

y Y position of the chart within its container.

Example

```
            def demo(self, drawing=None):
                if not drawing:
                    tx,ty = self._getDrawingDimensions()
                    drawing = Drawing(tx, ty)

Pie(Widget)

Public Attributes

data list of numbers defining wedge sizes; need not sum to 1

direction 'clockwise' or 'anticlockwise'

height height of pie bounding box. Need not be same as height.

labels optional list of labels to use for each data point

slices collection of wedge descriptor objects

startAngle angle of first slice; like the compass, 0 is due North

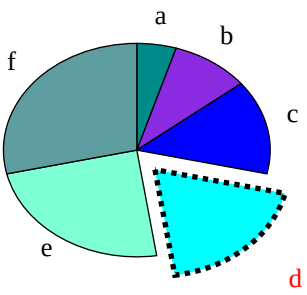
width width of pie bounding box. Need not be same as width.

x X position of the chart within its container.

y Y position of the chart within its container.

Example

```
def demo(self):
    d = Drawing(200, 100)
    pc = Pie()
    pc.x = 50
    pc.y = 10
    pc.width = 100
    pc.height = 80
    pc.data = [10,20,30,40,50,60]
    pc.labels = ['a','b','c','d','e','f']
    pc.slices.strokeWidth=0.5
    pc.slices[3].popout = 10
    pc.slices[3].strokeWidth = 2
    pc.slices[3].strokeDashArray = [2,2]
    pc.slices[3].labelRadius = 1.75
    pc.slices[3].fontColor = colors.red
    pc.slices[0].fillColor = colors.darkcyan
    pc.slices[1].fillColor = colors.blueviolet
    pc.slices[2].fillColor = colors.blue
    pc.slices[3].fillColor = colors.cyan
    pc.slices[4].fillColor = colors.aquamarine
    pc.slices[5].fillColor = colors.cadetblue
    pc.slices[6].fillColor = colors.lightcoral
    d.add(pc)
    return d
```



Properties of Example Widget

```
data = [1]
direction = 'clockwise'
height = 100
labels = None
slices = <reportlab.graphics.widgetbase.TypedPropertyCollection instance at 0x873968c>
startAngle = 90
```

```
width = 100
x = 0
y = 0
```

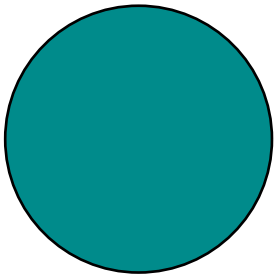
Functions

sample0a(...)

Make a degenerated pie chart with only one slice.

Example

```
def sample0a():
    "Make a degenerated pie chart with only one slice."
    d = Drawing(400, 200)
    pc = Pie()
    pc.x = 150
    pc.y = 50
    pc.data = [10]
    pc.labels = ['a']
    pc.slices.strokeWidth=1#0.5
    d.add(pc)
    return d
```

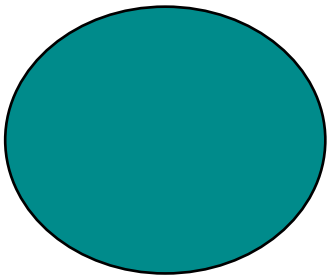


sample0b(...)

Make a degenerated pie chart with only one slice.

Example

```
def sample0b():
    "Make a degenerated pie chart with only one slice."
    d = Drawing(400, 200)
    pc = Pie()
    pc.x = 150
    pc.y = 50
    pc.width = 120
    pc.height = 100
    pc.data = [10]
    pc.labels = ['a']
    pc.slices.strokeWidth=1#0.5
    d.add(pc)
    return d
```

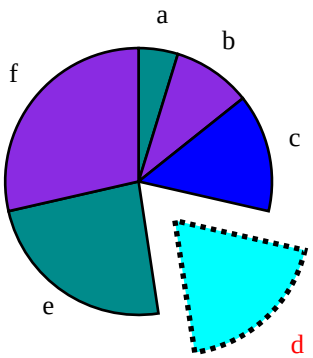


sample1(...)

Make a typical pie chart with with one slice treated in a special way.

Example

```
def sample1():
    "Make a typical pie chart with with one slice treated in a special way."
    d = Drawing(400, 200)
    pc = Pie()
    pc.x = 150
    pc.y = 50
    pc.data = [10, 20, 30, 40, 50, 60]
    pc.labels = ['a', 'b', 'c', 'd', 'e', 'f']
    pc.slices.strokeWidth=1#0.5
    pc.slices[3].popout = 20
    pc.slices[3].strokeWidth = 2
    pc.slices[3].strokeDashArray = [2,2]
    pc.slices[3].labelRadius = 1.75
    pc.slices[3].fontColor = colors.red
    d.add(pc)
    return d
```

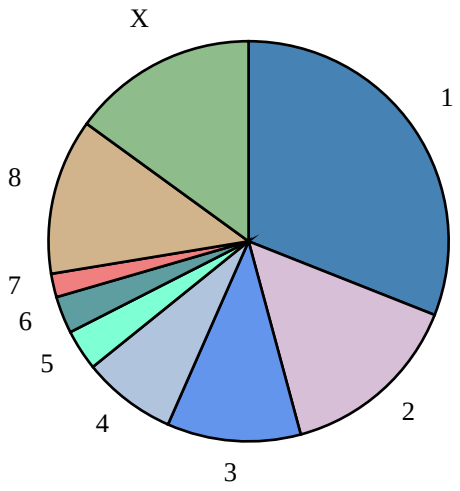


sample2(...)

Make a pie chart with nine slices.

Example

```
def sample2():
    "Make a pie chart with nine slices."
    d = Drawing(400, 200)
    pc = Pie()
    pc.x = 125
    pc.y = 25
    pc.data = [0.31, 0.148, 0.108,
               0.076, 0.033, 0.03,
               0.019, 0.126, 0.15]
    pc.labels = ['1', '2', '3', '4', '5', '6', '7', '8', 'X']
    pc.width = 150
    pc.height = 150
    pc.slices.strokeWidth=1#0.5
    pc.slices[0].fillColor = colors.steelblue
    pc.slices[1].fillColor = colors.thistle
    pc.slices[2].fillColor = colors.cornflower
    pc.slices[3].fillColor = colors.lightsteelblue
    pc.slices[4].fillColor = colors.aquamarine
    pc.slices[5].fillColor = colors.cadetblue
    pc.slices[6].fillColor = colors.lightcoral
    pc.slices[7].fillColor = colors.tan
    pc.slices[8].fillColor = colors.darkseagreen
    d.add(pc)
    return d
```

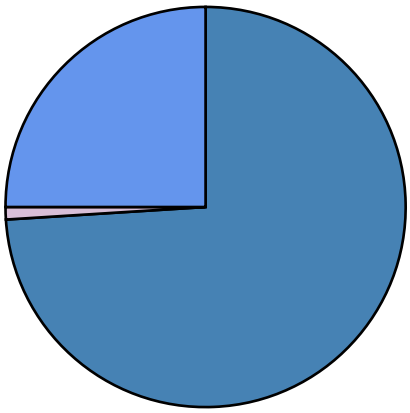


sample3(...)

Make a pie chart with a very slim slice.

Example

```
def sample3():
    "Make a pie chart with a very slim slice."
    d = Drawing(400, 200)
    pc = Pie()
    pc.x = 125
    pc.y = 25
    pc.data = [74, 1, 25]
    pc.width = 150
    pc.height = 150
    pc.slices.strokeWidth=1#0.5
    pc.slices[0].fillColor = colors.steelblue
    pc.slices[1].fillColor = colors.thistle
    pc.slices[2].fillColor = colors.cornflower
    d.add(pc)
    return d
```



sample4(...)

Make a pie chart with several very slim slices.

Example

```
def sample4():
    "Make a pie chart with several very slim slices."
    d = Drawing(400, 200)
    pc = Pie()
    pc.x = 125
    pc.y = 25
    pc.data = [74, 1, 1, 1, 1, 22]
    pc.width = 150
    pc.height = 150
    pc.slices.strokeWidth=1#0.5
    pc.slices[0].fillColor = colors.steelblue
    pc.slices[1].fillColor = colors.thistle
    pc.slices[2].fillColor = colors.cornflower
    pc.slices[3].fillColor = colors.lightsteelblue
    pc.slices[4].fillColor = colors.aquamarine
    pc.slices[5].fillColor = colors.cadetblue
    d.add(pc)
    return d
```

```

Label(Widget)

A text label to attach to something else, such as a chart axis.

This allows you to specify an offset, angle and many anchor properties relative to the label's origin. It allows, for example, angled multiline axis labels.

```

slidebox

Classes

SlideBox(Widget)

Returns a slidebox widget

Public Attributes

background Colour of the background to the drawing (if any)

bottomPadding Padding at bottom of drawing

boxHeight Height of the boxes

boxOutlineColor Colour used to outline the boxes (if any)

boxOutlineWidth Width of the box outline (if any)

boxSpacing Space between the boxes

boxWidth Width of the boxes

endColor Color of last box

labelFillColor Colour for number insides

labelFontName Name of font used for the labels

labelFontSize Size of font used for the labels

labelStrokeColor Colour for for number outlines

leftPadding Padding on left of drawing

numberOfBoxes How many boxes there are

rightPadding Padding on right of drawing

sourceLabelFillColor Colour ink for the 'source' label (bottom right)

sourceLabelFontName Name of font used for the 'source' label

sourceLabelFontSize Font size for the 'source' label

sourceLabelOffset Padding at bottom of drawing

sourceLabelText Text used for the 'source' label (can be empty)

startColor Color of first box

topPadding Padding at top of drawing

triangleFillColor Colour of indicator triangles

triangleHeight Height of indicator triangles

trianglePosition Which box is highlighted by the triangles

triangleStrokeColor Colour of indicator triangle outline

triangleStrokeWidth Colour of indicator triangle outline

triangleWidth Width of indicator triangles

Example

```
def demo(self,drawing=None):
    from reportlab.lib import colors
    if not drawing:
        tx,ty=self._getDrawingDimensions()
        drawing = Drawing(tx,ty)
    drawing.add(self.draw())
    return drawing
```

areas

This module defines a Area mixin classes

Classes

PlotArea(Widget)

Abstract base class representing a chart's plot area, pretty unusable by itself.

Public Attributes

background Handle to background object.

debug Used only for debugging.

fillColor Color of the plot area interior.

height Height of the chart.

strokeColor Color of the plot area border.

strokeWidth Width plot area border.

width Width of the chart.

x X position of the lower-left corner of the chart.

y Y position of the lower-left corner of the chart.

Example

```
            def demo(self):
                msg = "demo() must be implemented for each Widget!"
                raise shapes.NotImplementedError, msg
```

Properties of Example Widget

```
        background = None
        debug = 0
        fillColor = None
        height = 85
        strokeColor = None
        strokeWidth = 1
        width = 180
        x = 20
        y = 10
```

dotbox

Classes

DotBox(Widget)

Returns a dotbox widget.

Public Attributes

dotColor Colour of the circle on the box

dotDiameter Diameter of the circle used for the 'dot'

dotXPosition X Position of the circle

dotYPosition X Position of the circle

gridColor Colour for the box and gridding

gridDivWidth Width of each 'box'

labelFontName Name of font used for the labels

labelFontSize Size of font used for the labels

labelOffset Space between label text and grid edge

strokeWidth Width of the grid and dot outline

x X Position of dotbox

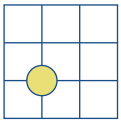
xlabels List of text labels for boxes on left hand side

y Y Position of dotbox

ylabels Text label for second box on left hand side

Example

```
def demo(self,drawing=None):
    if not drawing:
        tx,ty=self._getDrawingDimensions()
        drawing = Drawing(tx,ty)
    drawing.add(self.draw())
    return drawing
```



Properties of Example Widget

```
dotColor = Color(.909804,.878431,.466667)
dotDiameter = 11.338582677165356
dotXPosition = 1
dotYPosition = 1
gridColor = Color(.098039,.301961,.529412)
```

```
gridDivWidth = 14.173228346456693
labelFontName = 'Helvetica'
labelFontSize = 6
labelOffset = 5
strokeWidth = 0.5
x = 30
xlabels = ['Value', 'Blend', 'Growth']
y = 5
ylabels = ['Small', 'Medium', 'Large']
```

spider

Spider Chart

Normal use shows variation of 5-10 parameters against some 'norm' or target.
When there is more than one series, place the series with the largest
numbers first, as it will be overdrawn by each successive one.

Classes

SpiderChart(PlotArea)

Public Attributes

background Handle to background object.

data Data to be plotted, list of (lists of) numbers.

debug Used only for debugging.

direction 'clockwise' or 'anticlockwise'

fillColor Color of the plot area interior.

height Height of the chart.

labels optional list of labels to use for each data point

startAngle angle of first slice; like the compass, 0 is due North

strands collection of strand descriptor objects

strokeColor Color of the plot area border.

strokeWidth Width plot area border.

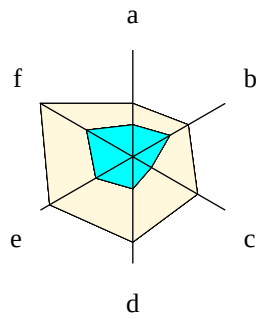
width Width of the chart.

x X position of the lower-left corner of the chart.

y Y position of the lower-left corner of the chart.

Example

```
            def demo(self):
                d = Drawing(200, 100)
                sp = SpiderChart()
                sp.x = 50
                sp.y = 10
                sp.width = 100
                sp.height = 80
                sp.data = [[10,12,14,16,18,20],[6,8,4,6,8,10]]
                sp.labels = ['a','b','c','d','e','f']
                d.add(sp)
                return d
```



Properties of Example Widget

```
background = None
data = [[10, 12, 14, 16, 14, 12], [6, 8, 10, 12, 9, 11]]
debug = 0
direction = 'clockwise'
fillColor = None
height = 85
labels = None
startAngle = 90
strands = <reportlab.graphics.widgetbase.TypedPropertyCollection instance at 0x87d46ec>
strokeColor = None
strokeWidth = 1
width = 180
x = 20
y = 10
```

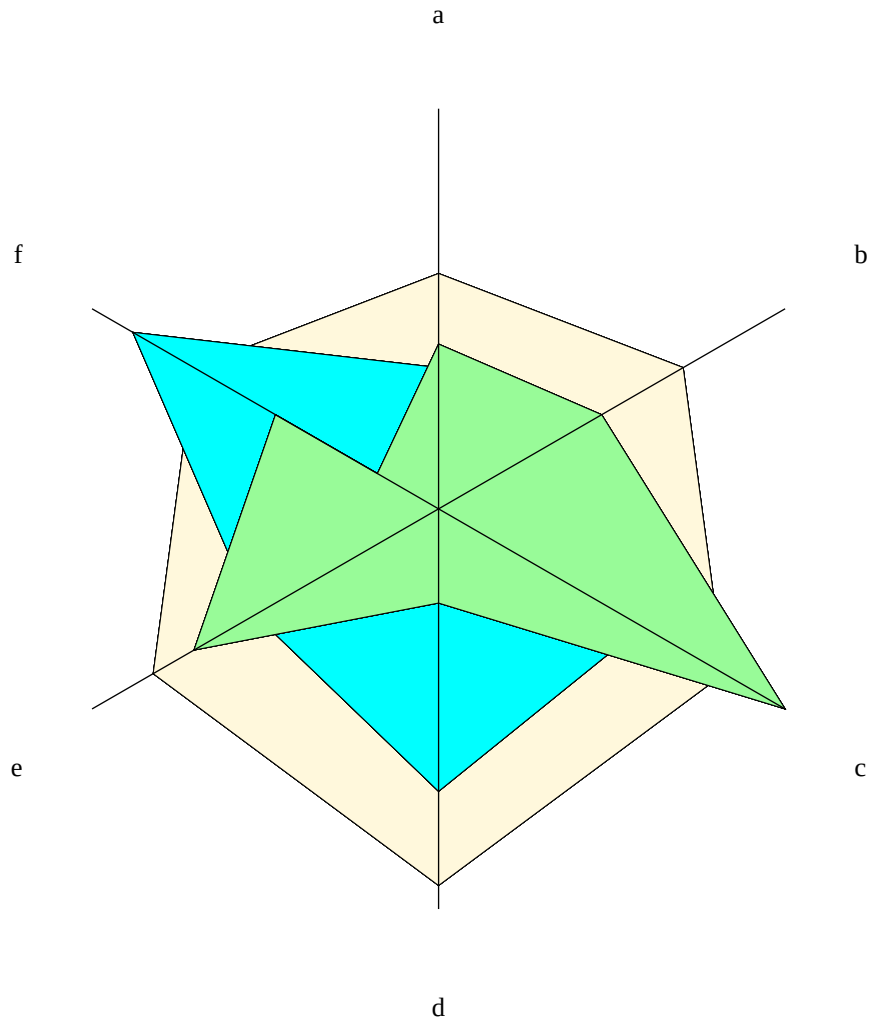
Functions

sample1(...)

Make a simple spider chart

Example

```
def sample1():
    "Make a simple spider chart"
    d = Drawing(400, 400)
    pc = SpiderChart()
    pc.x = 50
    pc.y = 50
    pc.width = 300
    pc.height = 300
    pc.data = [[10,12,14,16,14,12], [6,8,10,12,9,15],[7,8,17,4,12,8,3]]
    pc.labels = ['a','b','c','d','e','f']
    pc.strands[2].fillColor=colors.palegreen
    d.add(pc)
    return d
```



flags

This file is a collection of flag graphics as widgets.

All flags are represented at the ratio of 1:2, even where the official ratio for the flag is something else (such as 3:5 for the German national flag). The only exceptions are for where this would look _very_ wrong, such as the Danish flag whose (ratio is 28:37), or the Swiss flag (which is square).

Unless otherwise stated, these flags are all the 'national flags' of the countries, rather than their state flags, naval flags, ensigns or any other variants. (National flags are the flag flown by civilians of a country and the ones usually used to represent a country abroad. State flags are the variants used by the government and by diplomatic missions overseas).

To check on how close these are to the 'official' representations of flags, check the World Flag Database at http://www.flags.ndirect.co.uk/

The flags this file contains are:

EU Members:
United Kingdom, Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Holland (The Netherlands), Spain, Sweden

Others:
USA, Czech Republic, European Union, Switzerland, Turkey, Brazil

(Brazilian flag contributed by Publio da Costa Melo [publio@planetarium.com.br]).

Classes

Flag(_Symbol)

This is a generic flag class that all the flags in this file use as a basis.

This class basically provides edges and a tidy-up routine to hide any bits of line that overlap the 'outside' of the flag

possible attributes:
'x', 'y', 'size', 'fillColor'

Public Attributes

border Whether a background is drawn

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor Background color

kind Which flag

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

Star(_Symbol)

This draws a 5-pointed star.

possible attributes:
'x', 'y', 'size', 'fillColor', 'strokeColor'

Public Attributes

angle angle in degrees

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

signsandsymbols

This file is a collection of widgets to produce some common signs and symbols.

Widgets include:
- ETriangle (an equilateral triangle),
- RTriangle (a right angled triangle),
- Octagon,
- Crossbox,
- Tickbox,
- SmileyFace,
- StopSign,
- NoEntry,
- NotAllowed (the red roundel from 'no smoking' signs),
- NoSmoking,
- DangerSign (a black exclamation point in a yellow triangle),
- YesNo (returns a tickbox or a crossbox depending on a testvalue),
- FloppyDisk,
- ArrowOne, and
- ArrowTwo

Classes

ArrowOne(_Symbol)

This widget draws an arrow (style one).

possible attributes:

'x', 'y', 'size', 'fillColor'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

ArrowTwo(ArrowOne)

This widget draws an arrow (style two).

possible attributes:
'x', 'y', 'size', 'fillColor'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

Crossbox(_Symbol)

This draws a black box with a red cross in it - a 'checkbox'.

possible attributes:
'x', 'y', 'size', 'crossColor', 'strokeColor', 'crosswidth'

Public Attributes

crossColor None

crosswidth None

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

DangerSign(_Symbol)

This draws a 'danger' sign: a yellow box with a black exclamation point.

possible attributes:
'x', 'y', 'size', 'strokeColor', 'fillColor', 'strokeWidth'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

ETriangle(_Symbol)

This draws an equilateral triangle.

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

FloppyDisk(_Symbol)

This widget draws an icon of a floppy disk.

possible attributes:
'x', 'y', 'size', 'diskcolor'

Public Attributes

diskColor None

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

NoEntry(_Symbol)

This draws a (British) No Entry sign - a red circle with a white line on it.

possible attributes:
'x', 'y', 'size'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

innerBarColor color of the inner bar

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

NoSmoking(NotAllowed)

This draws a no-smoking sign.

possible attributes:
'x', 'y', 'size'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

NotAllowed(_Symbol)

This draws a 'forbidden' roundel (as used in the no-smoking sign).

possible attributes:
'x', 'y', 'size'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

Octagon(_Symbol)

This widget draws an Octagon.

possible attributes:
'x', 'y', 'size', 'fillColor', 'strokeColor'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

RTriangle(_Symbol)

This draws a right-angled triangle.

possible attributes:
'x', 'y', 'size', 'fillColor', 'strokeColor'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

StopSign(_Symbol)

This draws a (British) stop sign.

possible attributes:
'x', 'y', 'size'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

stopColor color of the word stop

strokeColor None

strokeWidth None

x symbol x coordinate

y symbol y coordinate

Tickbox(_Symbol)

This draws a black box with a red tick in it - another 'checkbox'.

possible attributes:
'x', 'y', 'size', 'tickColor', 'strokeColor', 'tickwidth'

Public Attributes

dx symbol x coordinate adjustment

dy symbol x coordinate adjustment

fillColor None

size None

strokeColor None

strokeWidth None

tickColor None

tickwidth None

x symbol x coordinate

y symbol y coordinate

YesNo(_Symbol)

This widget draw a tickbox or crossbox depending on 'testValue'.

If this widget is supplied with a 'True' or 1 as a value for
testValue, it will use the tickbox widget. Otherwise, it will
produce a crossbox.

possible attributes:
'x', 'y', 'size', 'tickcolor', 'crosscolor', 'testValue'

Public Attributes

Classes

DoubleGrid(Widget)

This combines two ordinary Grid objects orthogonal to each other.

Public Attributes

grid0 The first grid component.

grid1 The second grid component.

height The grid's height.

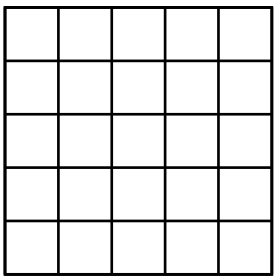
width The grid's width.

x The grid's lower-left x position.

y The grid's lower-left y position.

Example

```
            def demo(self):
                D = Drawing(100, 100)
                g = DoubleGrid()
                D.add(g)
                return D
```



Properties of Example Widget

```
grid0.delta = 20
grid0.delta0 = 0
grid0.deltaSteps = []
grid0.fillColor = Color(1,1,1)
grid0.height = 100
grid0.orientation = 'vertical'
grid0.stripeColors = [Color(1,0,0), Color(0,.501961,0), Color(0,0,1)]
grid0.strokeColor = Color(0,0,0)
grid0.strokeWidth = 1
grid0.useLines = 1
grid0.useRects = 0
grid0.width = 100
grid0.x = 0
grid0.y = 0
grid1.delta = 20
grid1.delta0 = 0
grid1.deltaSteps = []
grid1.fillColor = Color(1,1,1)
grid1.height = 100
grid1.orientation = 'horizontal'
grid1.stripeColors = [Color(1,0,0), Color(0,.501961,0), Color(0,0,1)]
grid1.strokeColor = Color(0,0,0)
grid1.strokeWidth = 1
grid1.useLines = 1
grid1.useRects = 0
grid1.width = 100
grid1.x = 0
grid1.y = 0
height = 100
width = 100
x = 0
y = 0
```

`Grid(Widget)`

This makes a rectangular grid of equidistant stripes.

The grid contains an outer border rectangle, and stripes
inside which can be drawn with lines and/or as solid tiles.
The drawing order is: outer rectangle, then lines and tiles.

The stripes' width is indicated as 'delta'. The sequence of
stripes can have an offset named 'delta0'. Both values need
to be positive!

Public Attributes

delta Determines the width/height of the stripes.

delta0 Determines the stripes initial width/height offset.

deltaSteps List of deltas to be used cyclically.

fillColor Background color for entire rectangle.

height The grid's height.

orientation Determines if stripes are vertical or horizontal.

stripeColors Colors applied cyclically in the right or upper direction.

strokeColor Color used for lines.

strokeWidth Width used for lines.

useLines Determines if stripes are drawn with lines.

useRects Determines if stripes are drawn with solid rectangles.

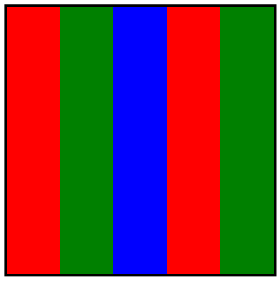
width The grid's width.

x The grid's lower-left x position.

y The grid's lower-left y position.

Example

```
def demo(self):
    D = Drawing(100, 100)
    g = Grid()
    D.add(g)
    return D
```



Properties of Example Widget

```
delta = 20
delta0 = 0
```

```
deltaSteps = []
fillColor = Color(1,1,1)
height = 100
orientation = 'vertical'
stripeColors = [Color(1,0,0), Color(0,.501961,0), Color(0,0,1)]
strokeColor = Color(0,0,0)
strokeWidth = 2
useLines = 0
useRects = 1
width = 100
x = 0
y = 0
```

ShadedPolygon(Widget, LineShape)

Public Attributes

angle Shading angle

cylinderMode True if shading reverses in middle.

fillColorEnd None

fillColorStart None

numShades The number of interpolating colors.

points None

strokeColor None

strokeDashArray None

strokeLineCap None

strokeLineJoin None

strokeMiterLimit None

strokeWidth None

Example

```
            def demo(self):
                msg = "demo() must be implemented for each Widget!"
                raise shapes.NotImplementedError, msg
```

Properties of Example Widget

```
        angle = 90
        cylinderMode = 0
        fillColorEnd = Color(0,.501961,0)
        fillColorStart = Color(1,0,0)
        numShades = 50
        points = [-1, -1, 2, 2, 3, -1]
        strokeColor = Color(0,0,0)
        strokeDashArray = None
        strokeLineCap = 0
        strokeLineJoin = 0
        strokeMiterLimit = 0
        strokeWidth = 1
```

ShadedRect(Widget)

This makes a rectangle with shaded colors between two colors.

Colors are interpolated linearly between 'fillColorStart'
and 'fillColorEnd', both of which appear at the margins.
If 'numShades' is set to one, though, only 'fillColorStart'
is used.

Public Attributes

cylinderMode True if shading reverses in middle.

fillColorEnd End value of the color shade.

fillColorStart Start value of the color shade.

height The grid's height.

numShades The number of interpolating colors.

orientation Determines if stripes are vertical or horizontal.

strokeColor Color used for border line.

strokeWidth Width used for lines.

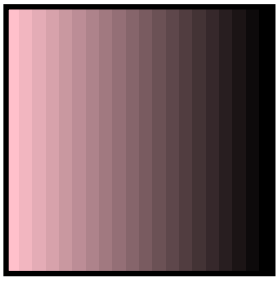
width The grid's width.

x The grid's lower-left x position.

y The grid's lower-left y position.

Example

```
def demo(self):
    D = Drawing(100, 100)
    g = ShadedRect()
    D.add(g)
    return D
```



Properties of Example Widget

```
cylinderMode = 0
fillColorEnd = Color(0,0,0)
fillColorStart = Color(1,.752941,.796078)
height = 100
numShades = 20
orientation = 'vertical'
strokeColor = Color(0,0,0)
strokeWidth = 2
width = 100
x = 0
y = 0
```
